

External & Internal Range Liquidity

TIME FRAME ALIGNMENT

1. Monthly levels > Daily structure
2. Weekly levels > H4 structure
3. Daily levels > H1 structure

DEFINING EXTERNAL & INTERNAL RANGE LIQUIDITY

1. *External Range Liquidity* [ERL] is defined by *highs or lows*.
2. *Internal Range Liquidity* [IRL] is defined by *Fair value gaps*.

When external range liquidity is taken a FVG [IRL] becomes the next draw

When a FVG is tagged an old low or old high [ERL] becomes the next draw

PRICE ONLY DOES TWO THINGS

1. Draws to old highs and lows
2. Rebalances an Imbalance
