

● INTRODUCTION

BERKUSA ARSIV

Hello. First of all, I want to thank you for your trust and purchase. This is what you'll find in this book. It's a summary of my extensive experience with the market. And there's a secret to proper market analysis to become a professional trader. Strategy, on the other hand, represents only 10% of this market and is nothing. The most important thing you need to understand and focus on is psychology and risk management. I know you won't apply these words, but try them and you'll get impressive results. I hope to be the person who changes your life for the better; it will be an honor for me, and I'll be happy for it.

1: Why We Trade The Algo Concept

2: LIQUIDITY / DAILY CYCLE / HTF CYCLE

3: MONEY TRANSFER

4: ALGO MARKET STRUCTURE

5: PREMIUM / DISCOUNT

6: EFFICIENT PRICE ACTION / INFECTION PRICE ACTION

7: ORDER LOCK / SWITCH BLOCK / REJECT BLOCK

8: TDI Indicator (Illuminated Concepts)

9: TOP-DOWN ANALYSIS

10: One-Minute Ping Pong Mastery

Why we negotiate The concept of Algo

The foreign exchange market is the largest market in the world in terms of liquidity, and of course, there is supply and demand in this market, but what most traders don't know is that the market is not subject to the laws of supply and demand. Why is this because there are those who manipulate prices? Banks and the world's largest financial institutions do this, so you won't make a profit because you can't explain these manipulations and believe that classic patterns work and all you have to do is apply them. But this isn't true because classical patterns and their logic are based on the fact that they are formed due to supply, demand, and investor psychology. It used to be old, but technology has now developed, and there are ways to store investor data, and for novice traders, this data is owned by a central bank.

When you buy, he sells, and when you sell, he buys because he knows in advance where you bought and where you sold, and on this basis, no matter what you try, he will come against you. Remember, because he simply has something that you don't have, ...and where you get your liquidity I talked about the foreign exchange market because it's the largest market in the world in terms of liquidity, but this talk applies to all other markets.

Summary: What have we learned so far about why beginner strategies don't work? Price manipulation occurs, and the reason for this manipulation is liquidity. Why don't the laws of supply and demand work?

☐ SOMETHING OBJECTIVE

1. induce traders to take positions
 2. Create panic and fear so that traders think irrationally
 3. Press stop loss and delete orders. Force traders into margin calls and pocket the profit.
- money**

☐ LIQUIDITY

Liquidity is the most important thing in this market. Many SMC traders truly believe they understand what liquidity is. In fact, they don't. Liquidity is what makes the market move, not supply and demand. Rather, liquidity because this is a market that moves based on price manipulation, and price manipulation to obtain liquidity.

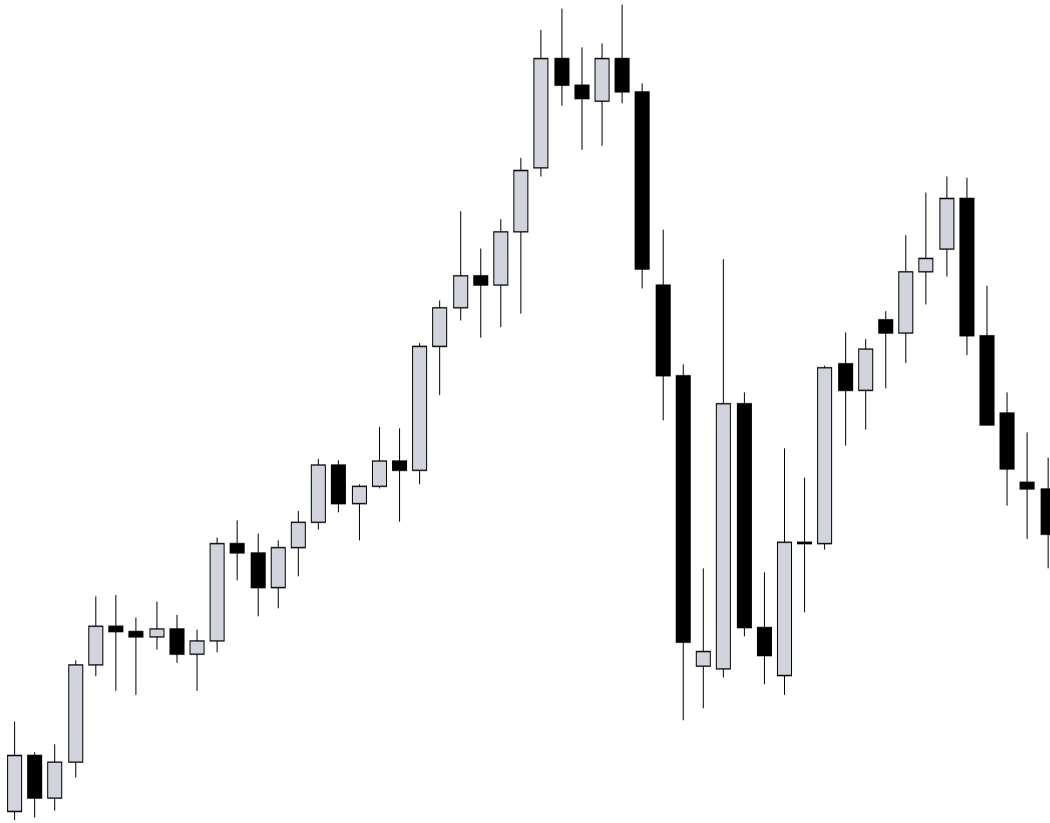

After understanding why liquidity is important, let's move on to the most important step, which is how do we know where liquidity is on the chart? Well, first, you need to know something. We don't know where liquidity is because we don't have the data the Central Bank has. We can only wait and see where liquidity can be found, and there are potential places where liquidity is very high and probabilistic places where liquidity is weak. You should know that all high and low points in a market are liquid. But to know whether it's significant liquidity or not, we must understand that HIGHER LIQUIDITY OVER TIME is not the same as LOWER LIQUIDITY OVER TIME. The longer the time, the greater the liquidity, and therefore the greater the liquidity, and the lower the timeframe, the weaker the liquidity.

- GREATER LIQUIDITY
- AVERAGE LIQUIDITY
- LOWER LIQUIDITY

1. GREATER LIQUIDITY

● **Example**

Where is the liquidity here?

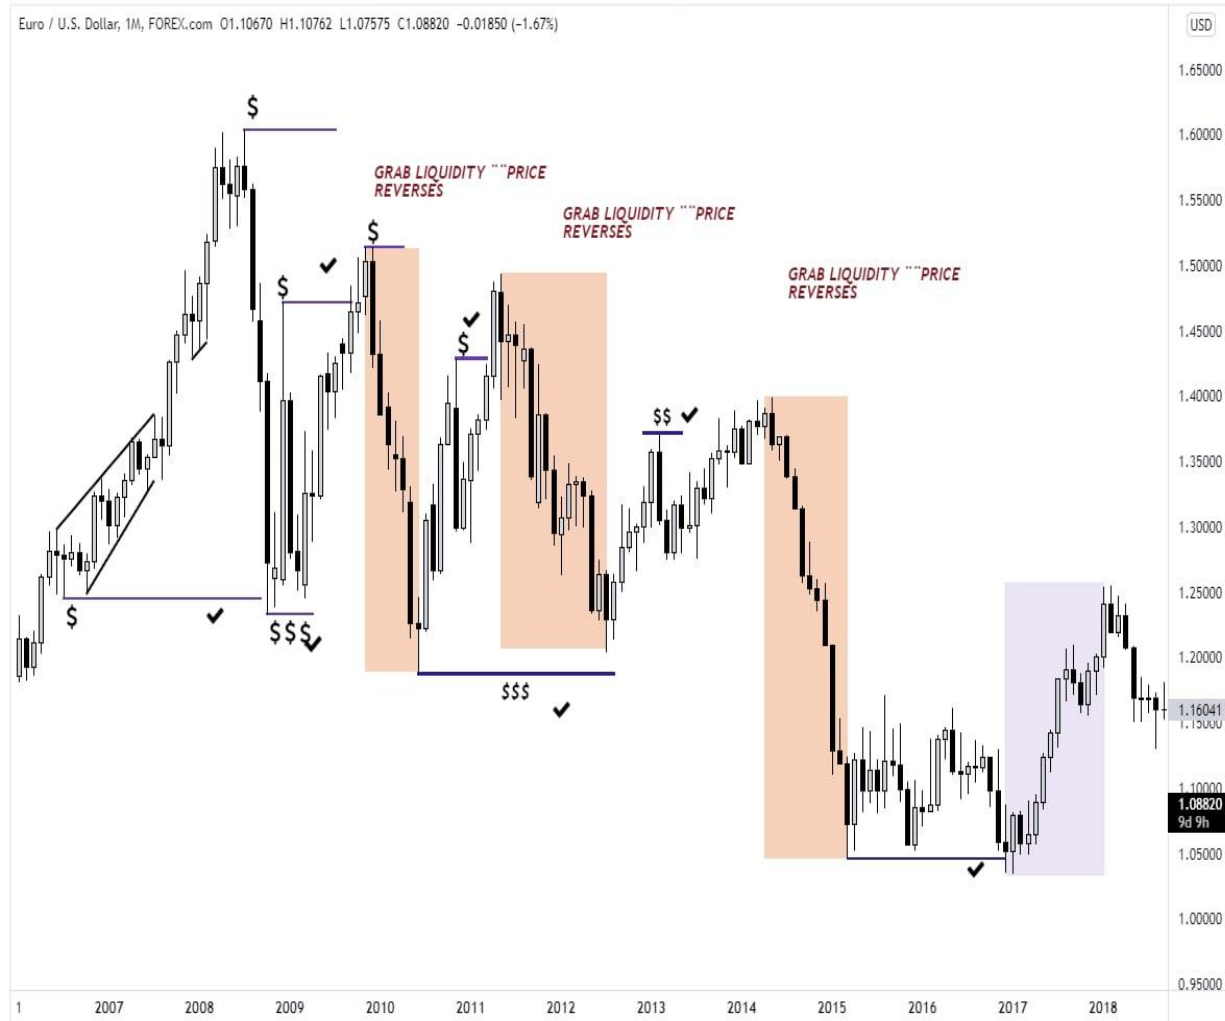

All these ups and downs are actually liquidity, but where is the liquidity that seems most important?

<https://www.tradingview.com/x/OknnXR5N/>

After it takes a liquidity price, REVERSES . Well, it's not that simple. I know you're wondering how we'll know if the price will reverse or not. Forget this question because you'll understand it after you finish reading this book. Now I just want you to pay attention with me and understand that after the price takes on significant liquidity (significant liquidity means there's a lot of money, there's enough for the price to make a big move because we're on the monthly chart), it will reverse, and WE'LL call IT (TRAP)

<https://www.tradingview.com/x/m5f6flXQ>

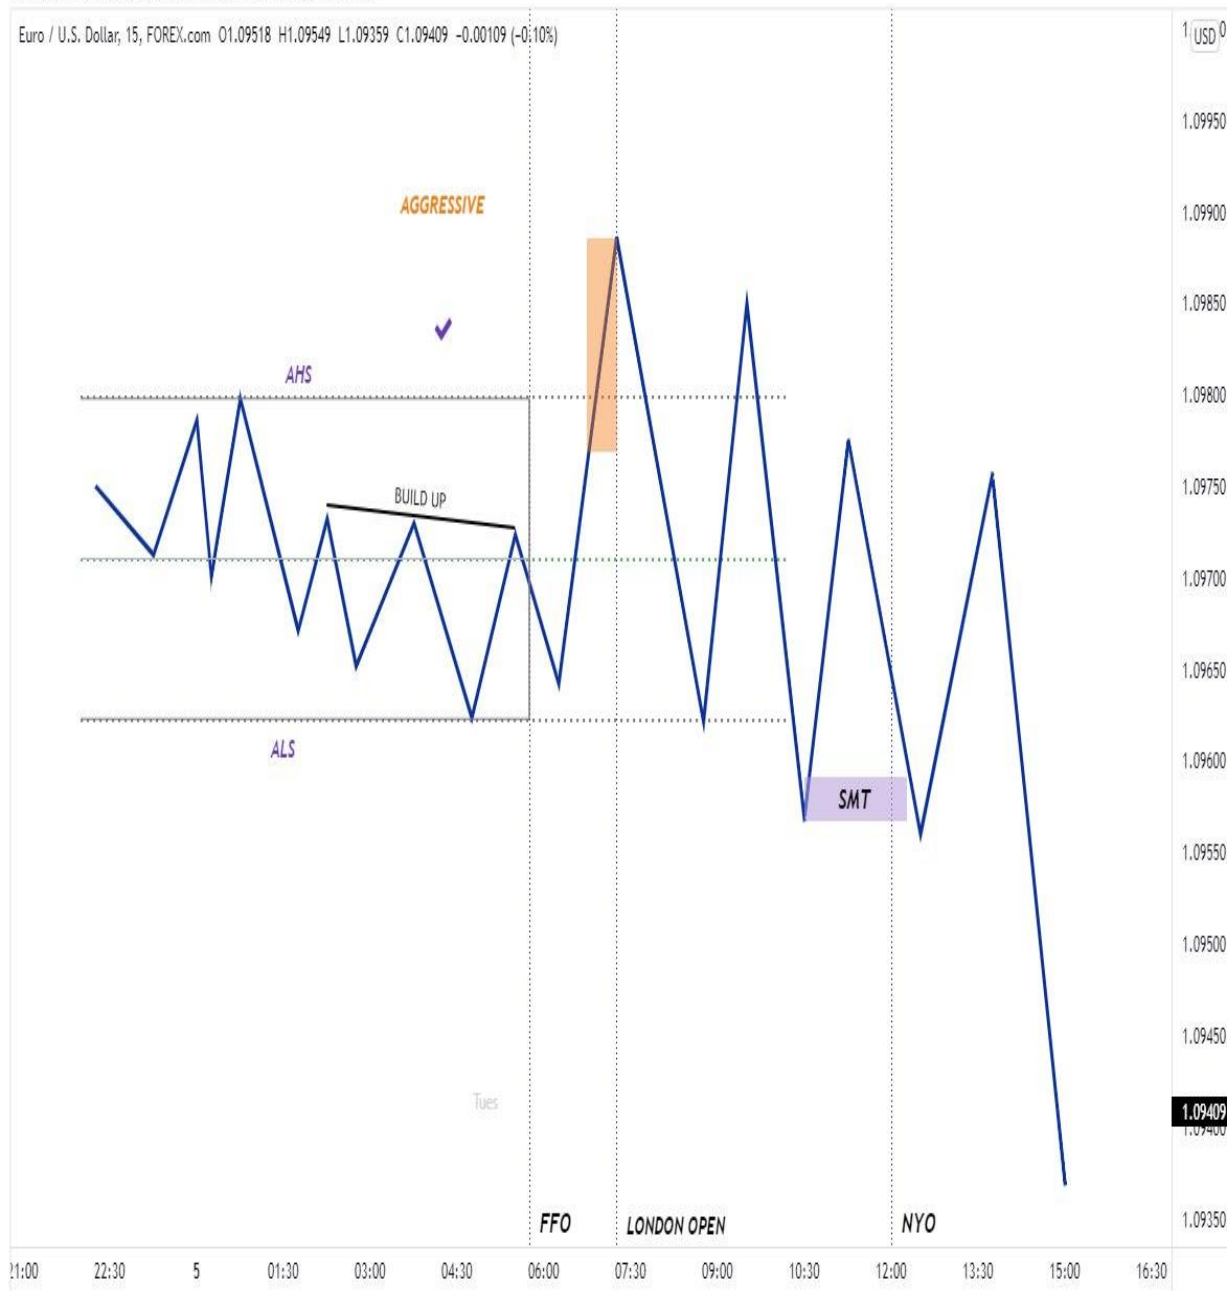

Cycle: BUILDING>AGGRESSIVE GRIP>REVERSES

Hjsorot7 published on TradingView.com, Apr 24, 2022 20:20 UTC

Case 1:

Hjsorot7 published on TradingView.com, Apr 21, 2022 15:30 UTC

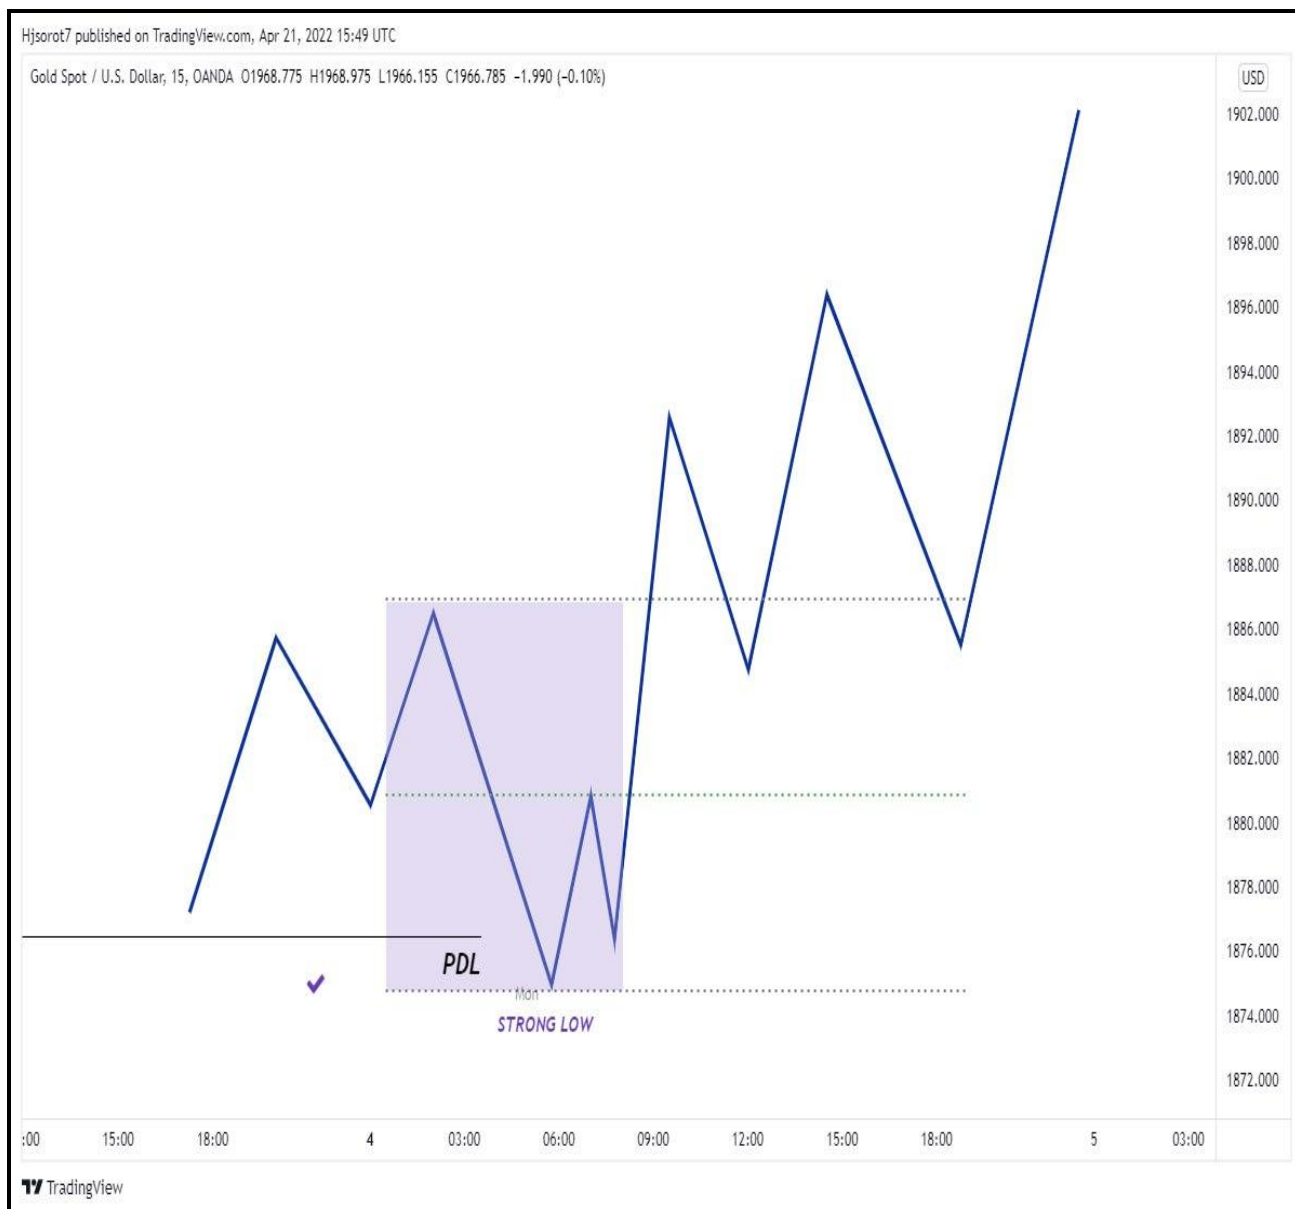

TradingView

<https://www.tradingview.com/x/NwD8Wh5F>

In Asia, create liquidity in Frankfurt. Fake moves. Aggressive move at the London Open. Take all the liquidity and then move in the opposite direction. Very simple.

Case 2:

<https://www.tradingview.com/x/9ZUfZICV/>

In this case, we have a strong low in Asia... A strong low means that liquidity is low and the structure is broken. We have liquidity in Asia. This order will be protected.

Notes: This case occurs in reversal (HTF reversal) OR when the trend is so strong

Hjsorot7 published on TradingView.com, Apr 21, 2022 16:12 UTC

TradingView

<https://www.tradingview.com/x/WGYruI0m/>

Bearish HTF direction.

When you don't see liquidity building up in the LTf, go to the HTF and find where the price builds liquidity.

Before

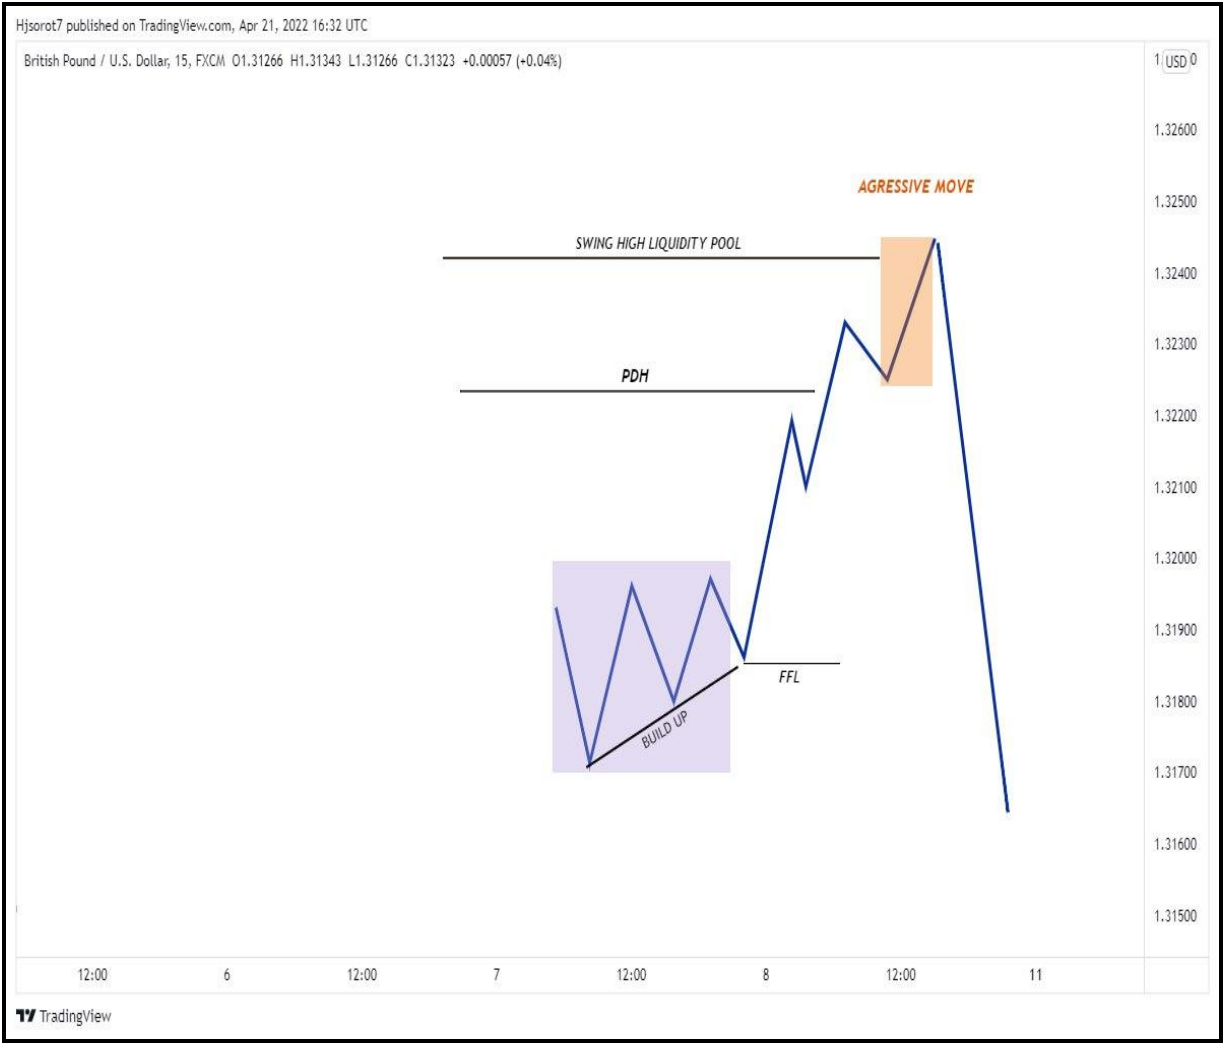

<https://www.tradingview.com/x/NCELwC9G/>

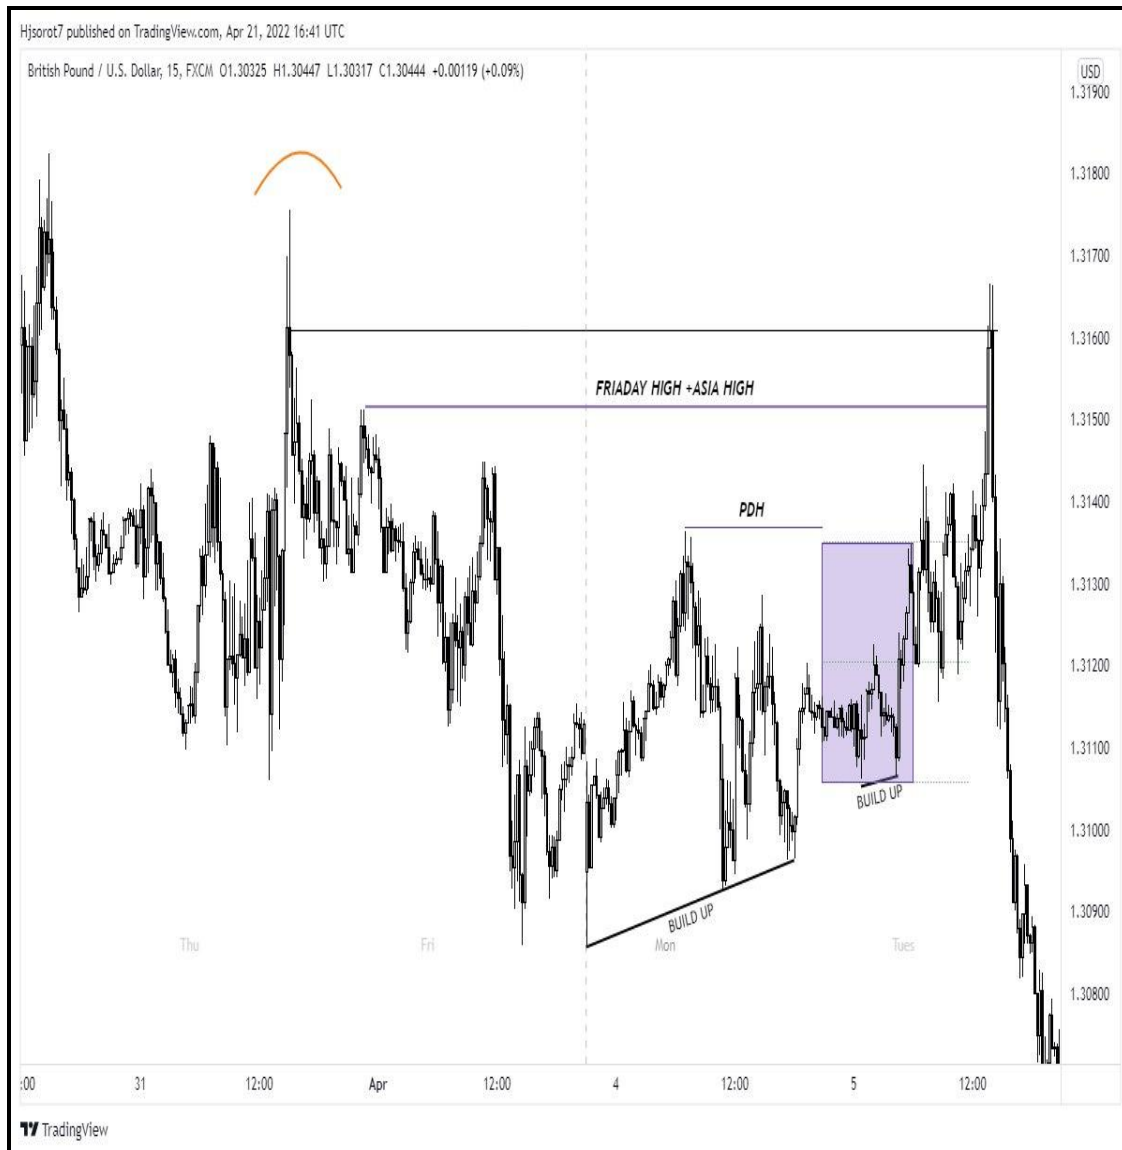

After

<https://www.tradingview.com/x/NCELwC9G>

Case 3:

Price Increase >Trap>

<https://www.tradingview.com/x/9BMawXjb/>

FOLLOW THE LIQUIDITY = FOLLOW THE SOMETHING

● **90MIN CYCLE**

We start counting at midnight, New York time. Every 90 minutes. There is a possibility that the price make a big move... so every 90 minutes we'll define the opening price. TO KNOW WHERE THE FALSE MOVE IS.

● **HTF LIQUIDITY CYCLE**

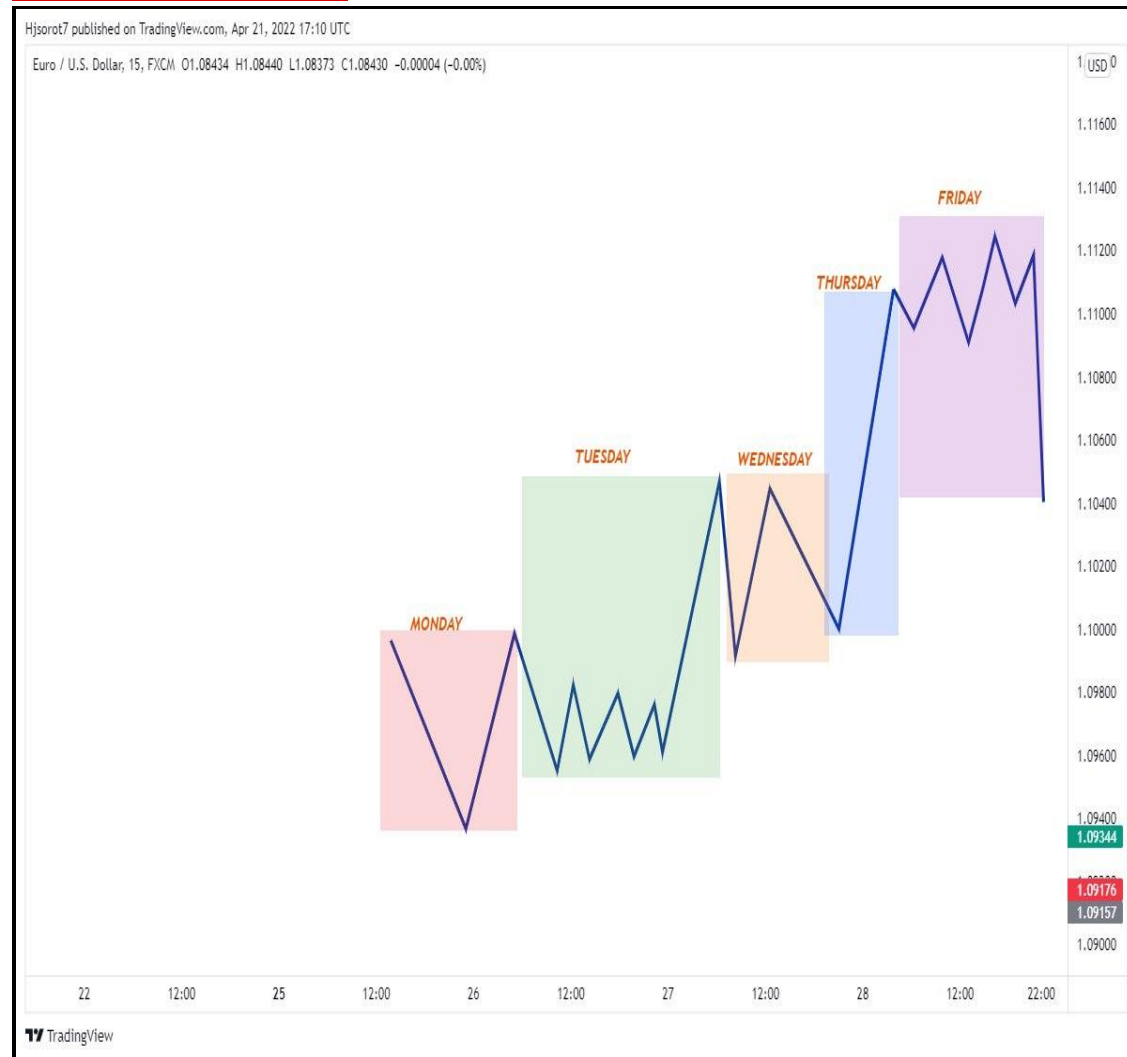

We have to know that every 3 to 5 days price changes direction but why because INTERNAL BANK PRICE DELIVERY ALGORITHM is always looking for data from last 3 or 5 days or last 3 or 5 weeks... or months or years and from here you understand that ALGO is divided into Long Term Algo and Short Term Algo types

Internal Bank: He is the one who stores the data...for all the places that have liquidity

Data = Liquidity

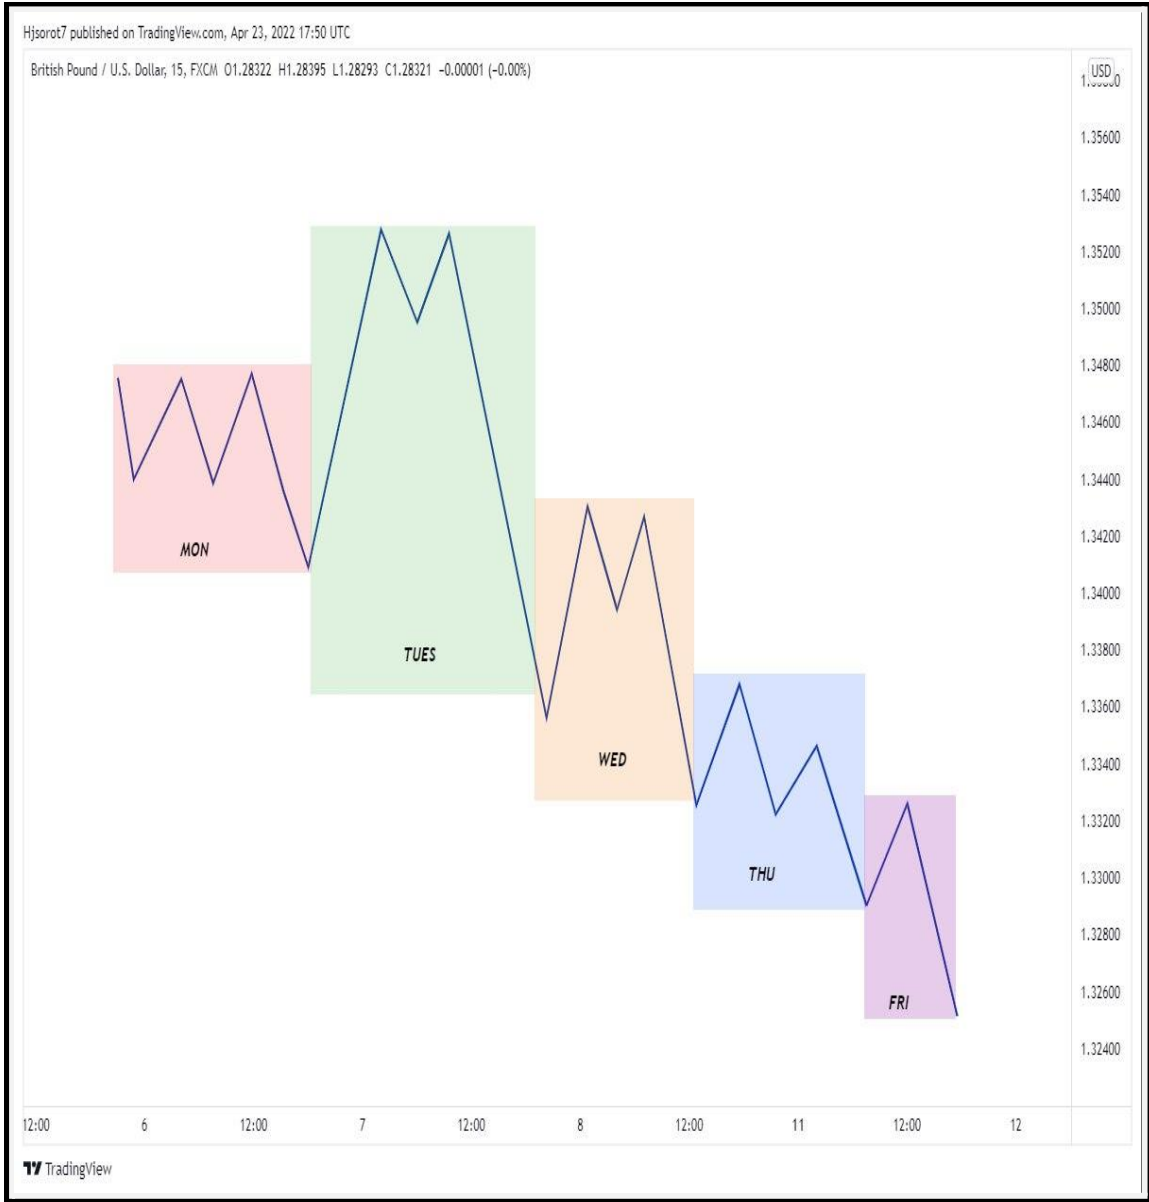

☐ Let's start with the **Weekly cycle:**

Case 1: BULLISH WEEK

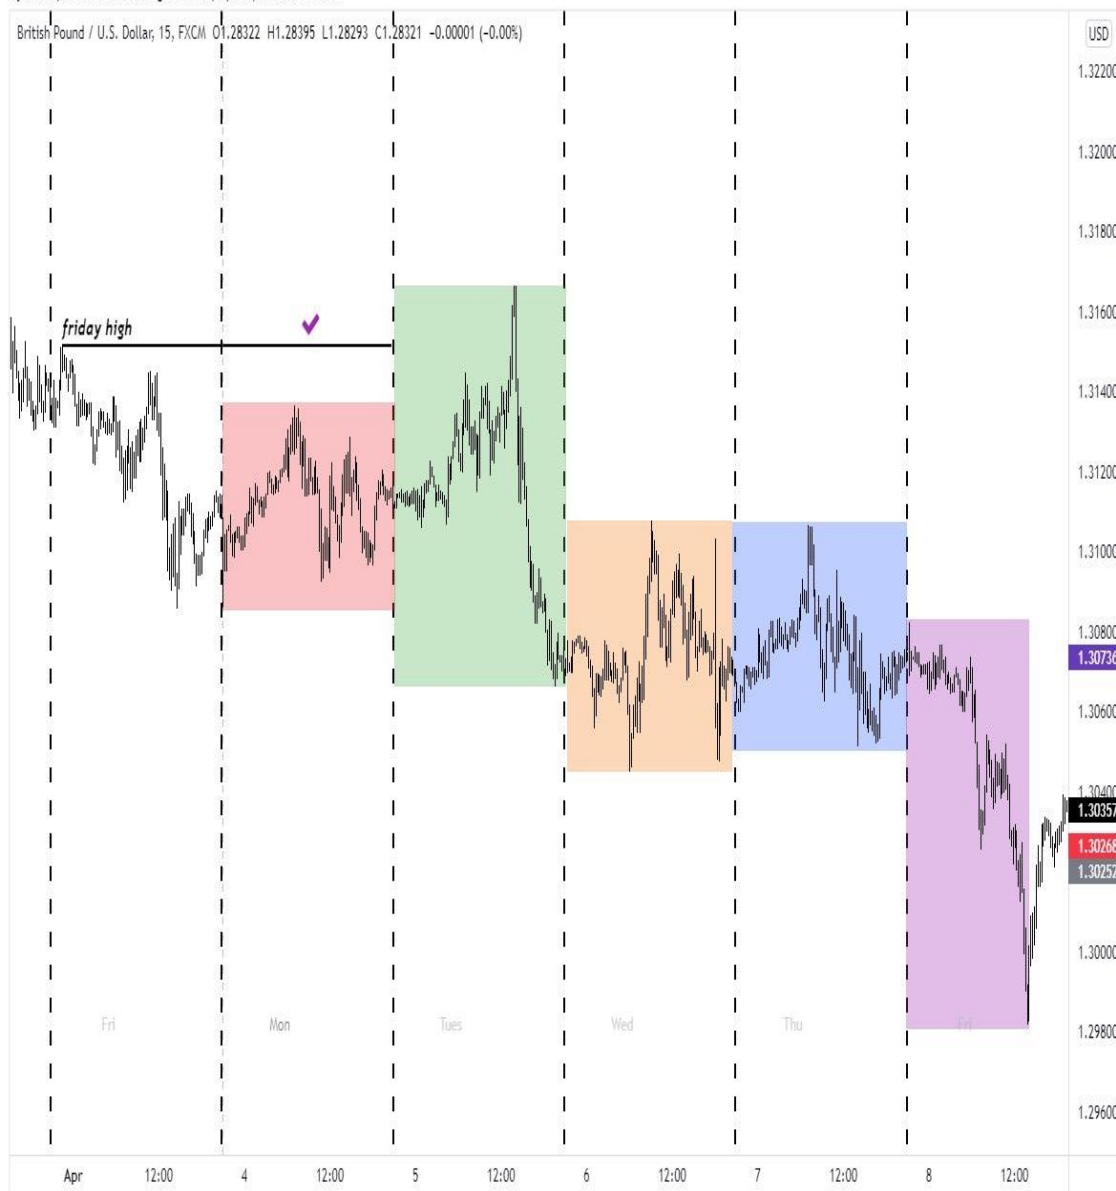

- ☐ Monday's manipulation move to capture liquidity. MANY TIMES THE MAXIMUM OR MINIMUM OF THE WEEK IS FORMED ON MONDAY
- ☐ Tuesday PRICE ACCUMULATES MORE ORDERS AND CONTINUES..
- ☐ Wednesday REACUMULATION AND SOMETIMES INVERSION (BASED ON HTF STRUCTURE)
- ☐ Thursday completes the move that occurred on Wednesday
- ☐ Friday DISTRIBUTION

Case 2:

<https://www.tradingview.com/x/LXoOpMBC/>

Hjsort7 published on TradingView.com, Apr 23, 2022 18:03 UTC

TV TradingView

<https://www.tradingview.com/x/5DxsNFOR/>

(engineered liquidity) on Monday why the price does that because the Algo needs more liquidity (more orders entering the market, so on Monday Accumulation

- ☐ Tuesday's manipulation price Take Monday's high + Friday's high Then the movement of manipulation occurs on Tuesday
- ☐ Wednesday+Thursday continuation Price simply CREATES a range to accumulate more orders Friday
- ☐ continuation/weekly low

● **HTF CYCLE**

You should know that there are two types of algos in the market: short-term algos and long-term algos. In the long term, for algos after taking significant liquidity, SETS orders your targets to be short or long, depending on the amount of liquidity you took.

After the price Get high liquidity and break Pdh (MOMENTUM SHIFT)

+ Ms: bullish momentum change

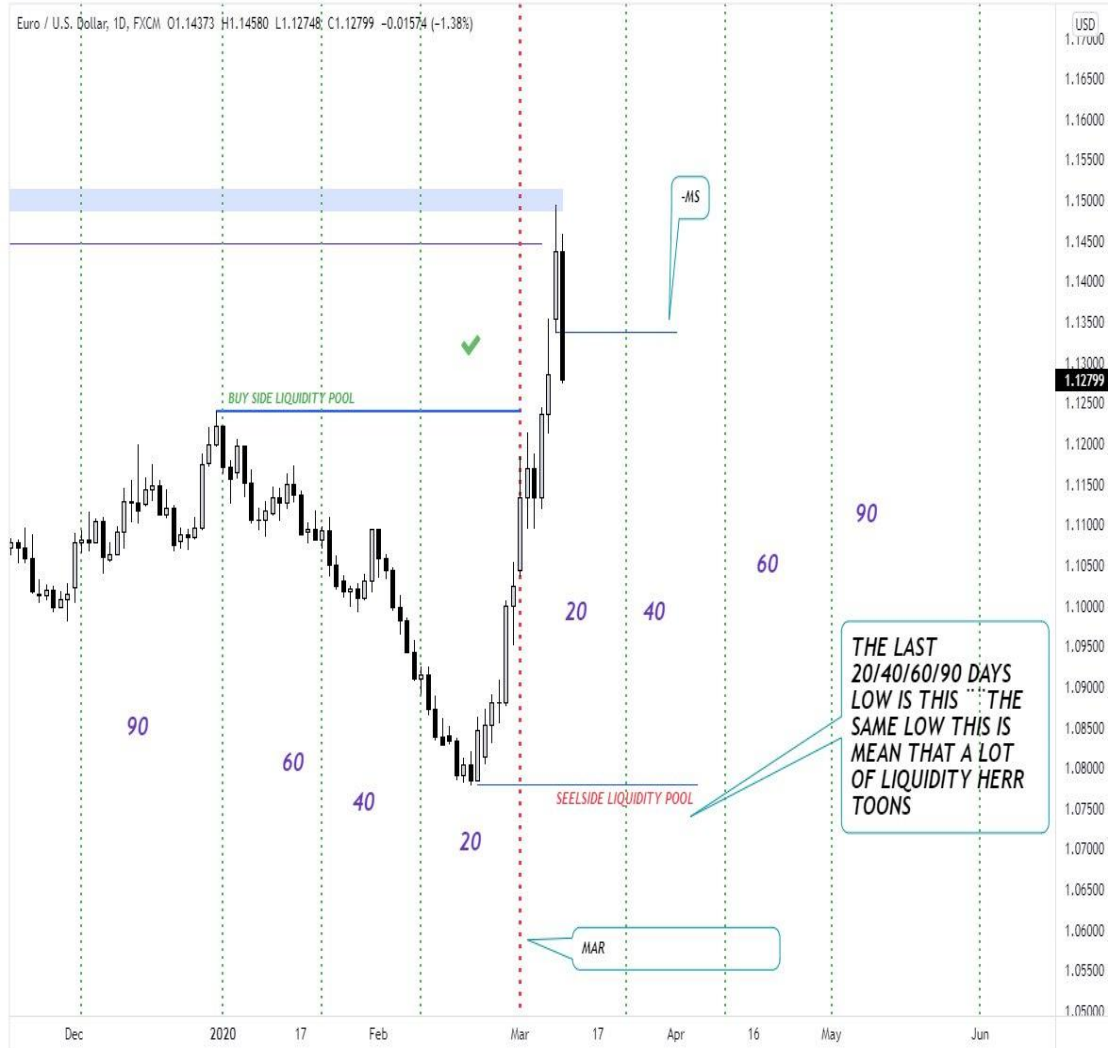

Let's go to the beginning of the month

(February) and see the last 20/40/60/90 days

And we define the highest high of the last 20 days and the highest high of the last 40 days... This is the goal of the algorithm.

After 20 days of The Trap There is a big chance that the price will reverse... not necessarily after 20 days, but most of the time after 20 days, maybe a little less, maybe a little more, BUT the average is 20 days

Hjsorot7 published on TradingView.com, Apr 24, 2022 18:24 UTC

TradingView

<https://www.tradingview.com/x/6IBJRNlw/>

Always for confirmation SHE We have a bearish momentum change

Hjsorot7 published on TradingView.com, Apr 24, 2022 18:31 UTC

TradingView

<https://www.tradingview.com/x/AosyaFTA/>

Use that the reversal has not occurred after 20 days because it is not necessary (the price moves after taking significant liquidity) CONFLUENCE OF YOUR BEARISH MOMENTUM CHANGE

Hjsorot7 published on TradingView.com, Apr 24, 2022 18:40 UTC

TradingView

<https://www.tradingview.com/x/5Wh9X9Th/>

Right now The Trap and The Target Hit in the same month The

This will cause the price to generate liquidity... in this case, go to the HTF to see where the liquidity price is generated and where.

<https://www.tradingview.com/x/OKDqTVx5/> price

● Market maker pattern

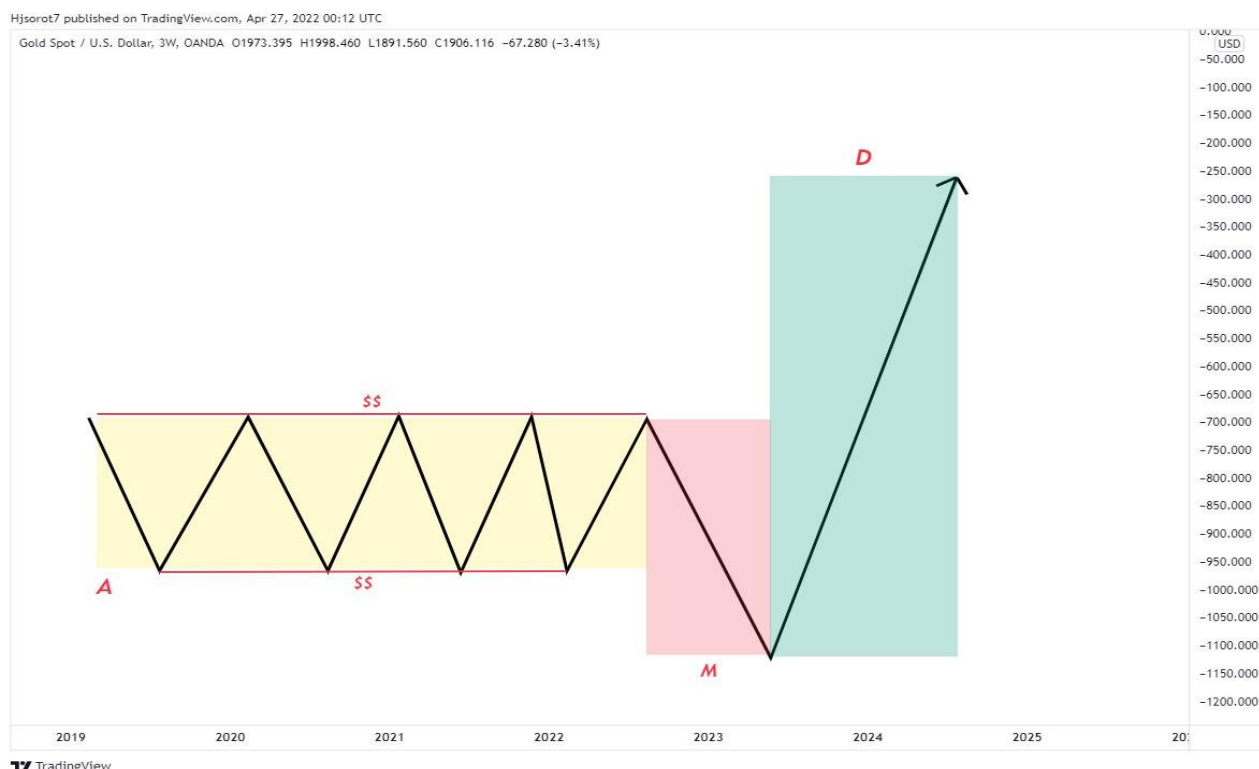

You should know that 80% of price movements are in the form of RANGES. Why does price ranges occur? Because it's the best way to manipulate prices and build liquidity.

, I will share with you the most important models that the price makes

1. AMD

AMD=ACCUMULATION_handling

DISTRIBUTION

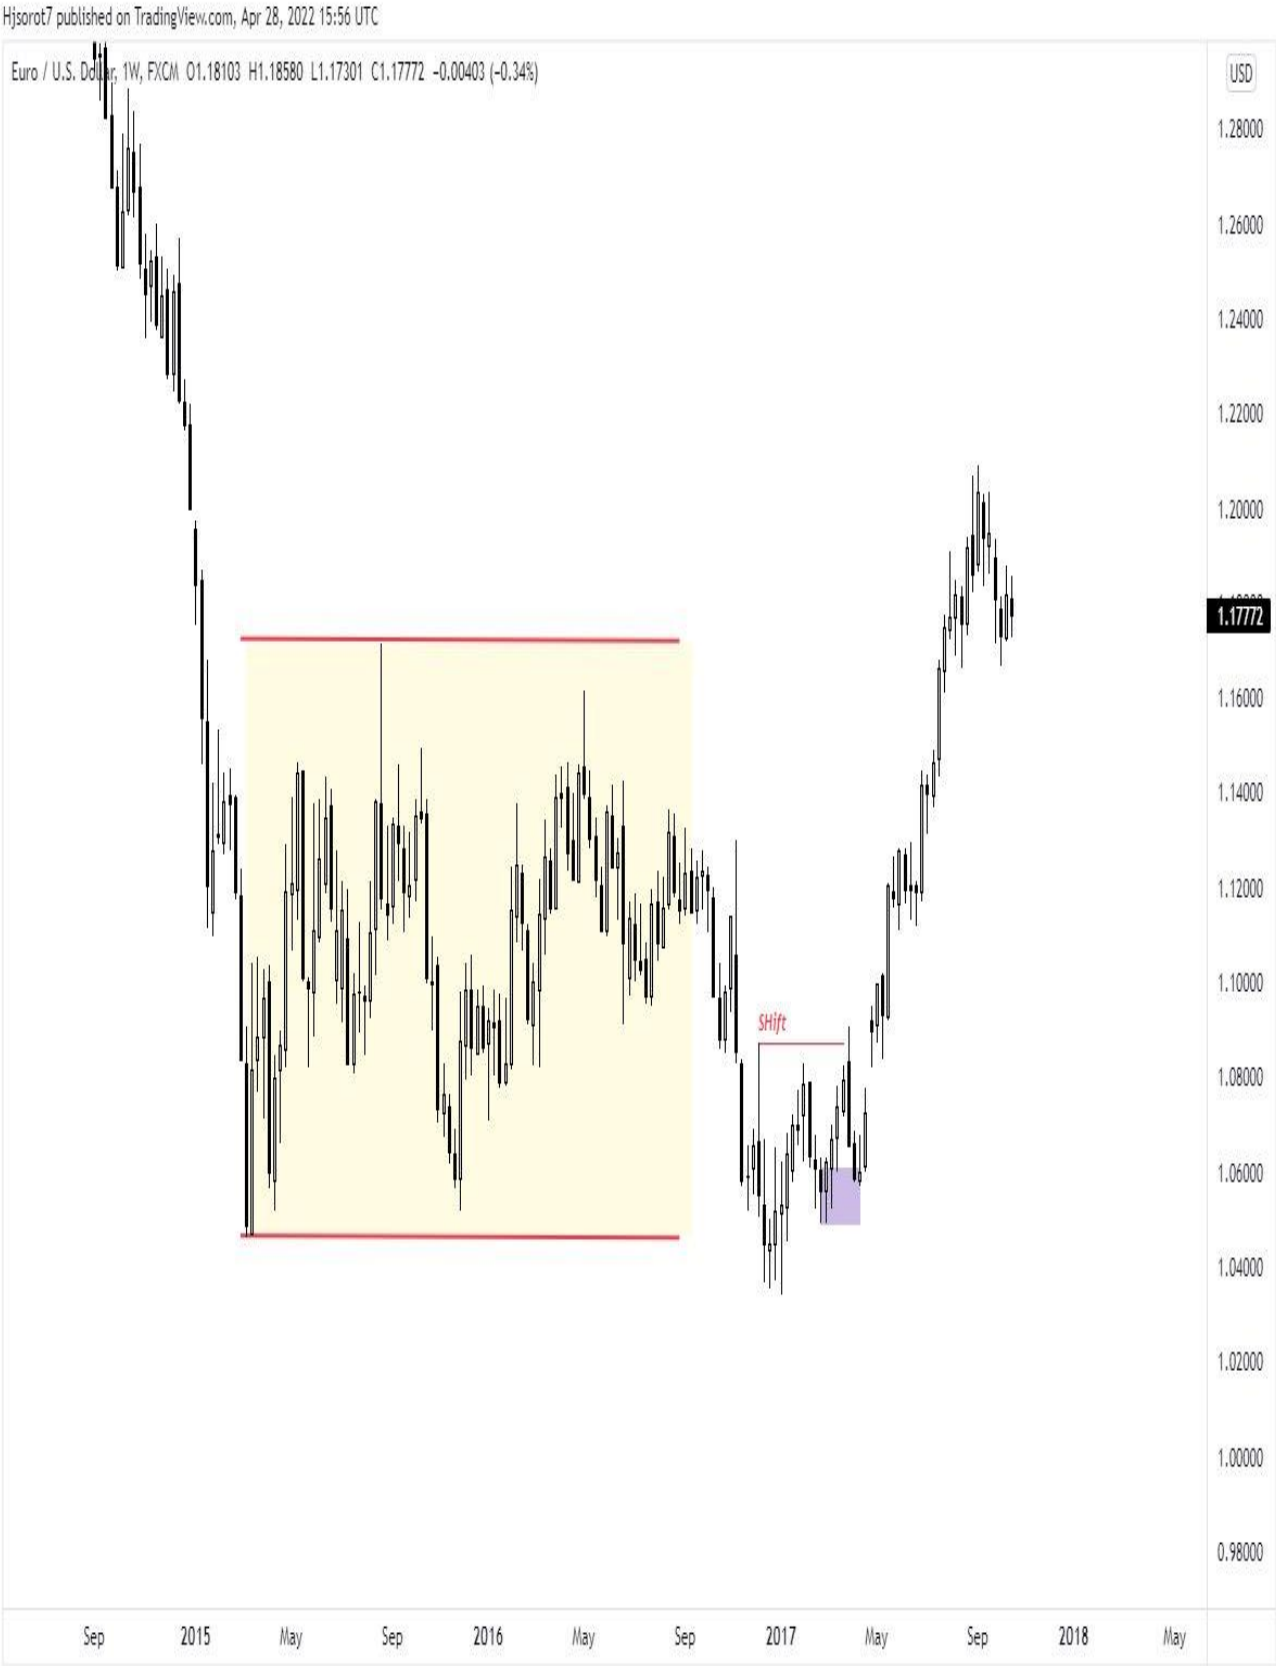

ACCUMULATION ACCUMULATION LIQUIDITY

FAKE MOVE (MANIPULATIVE MOVE TO INDUCE RETAILERS ON THE SIDE)

WRONG MARKET)

DISTRIBUTION=THE REAL MOVEMENT.

This is a simple model, and it will be easy for you to understand. This is a model. If you understand it, you can perform many operations daily because it repeats every day, every week, every month. For me, I consider it the most powerful model.

●IOF

IOF = INSTITUTIONAL ORDER FLOW

Very well. I want you to know: ALWAYS FOCUS ON LIQUIDITY FIRST. OK, LIQUIDITY FIRST, THAN IOF.

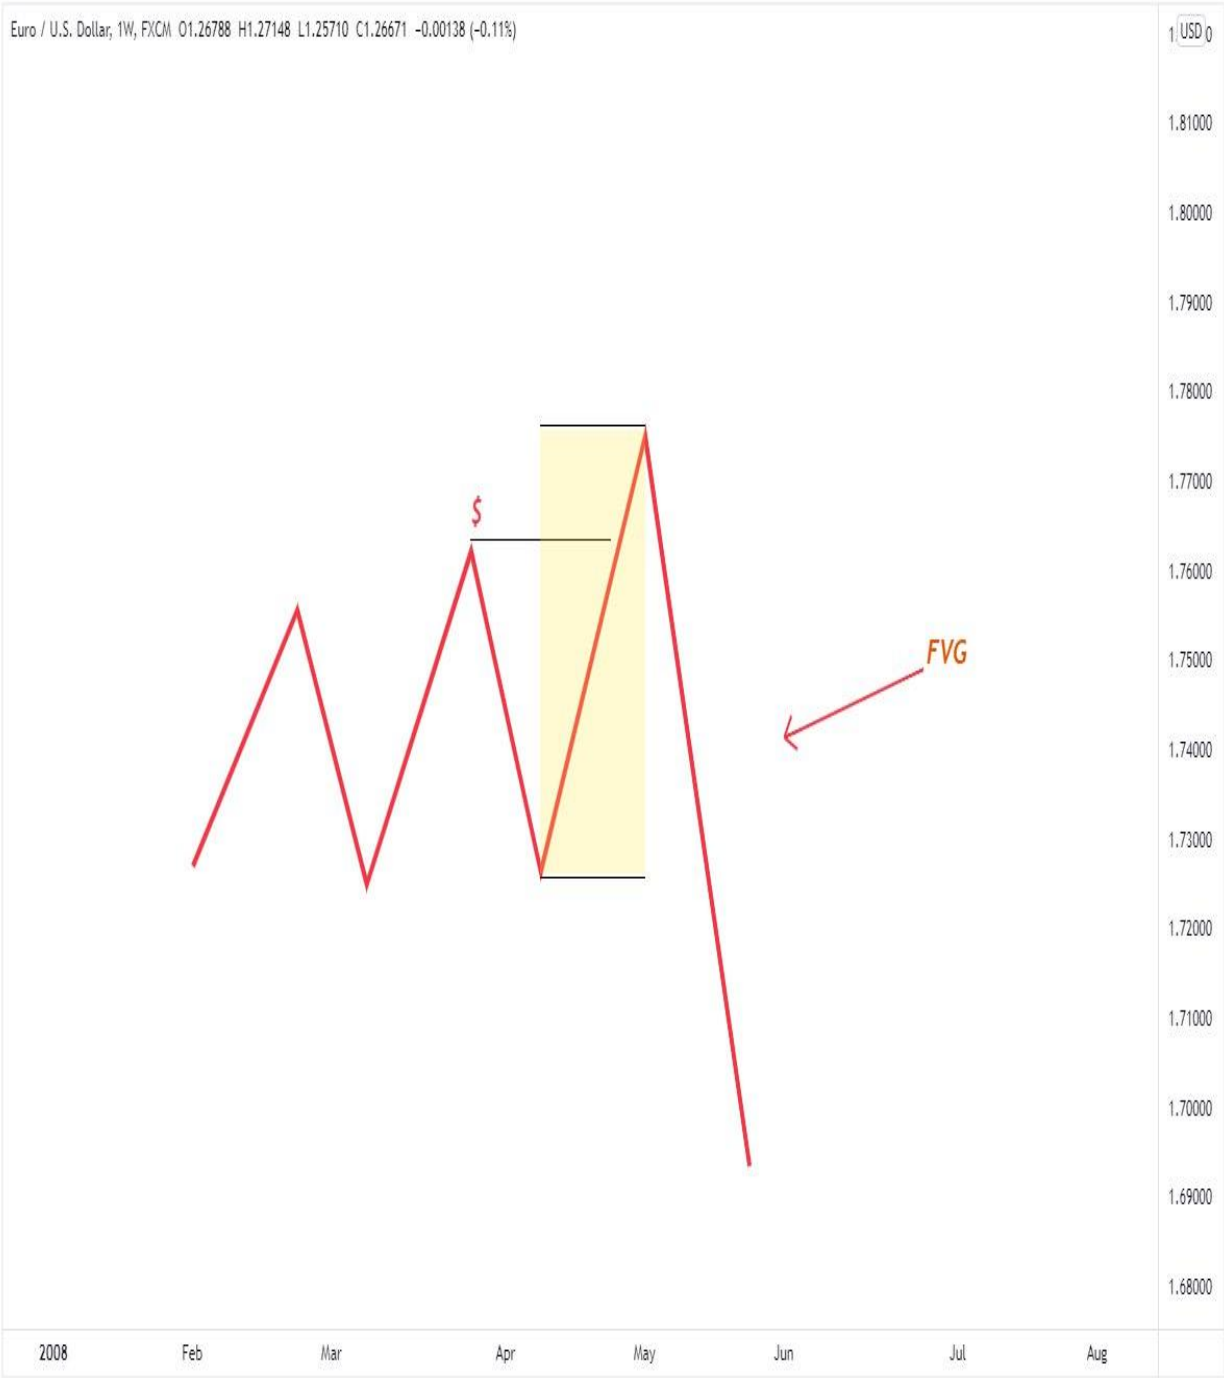

THERE IS ALWAYS A FALSE ZONE OF DEMAND AND SUPPLY...UNDERSTAND THE LOGIC

1.WATCH SOMETHING

CA=WATCH SOMETHING

It is the candle that forms when it takes liquidity and (forms FVG immediately after)

2. FAIR VALUE GAP/INEFFICIENCY

Inefficient pricing means the market must remain balanced; for every buy, there must be a sell. When we see only pure buying or selling, this creates gaps in the price that the central banking algorithm

You have to fill the gaps to make the price efficient again.

This is described as a market liquidity gap or **Liquidity EMPTY**

Hjsorot7 published on TradingView.com, Apr 29, 2022 02:31 UTC

<https://www.tradingview.com/x/DuQmIs1/>

Hjsorot7 published on TradingView.com, Apr 29, 2022 02:38 UTC

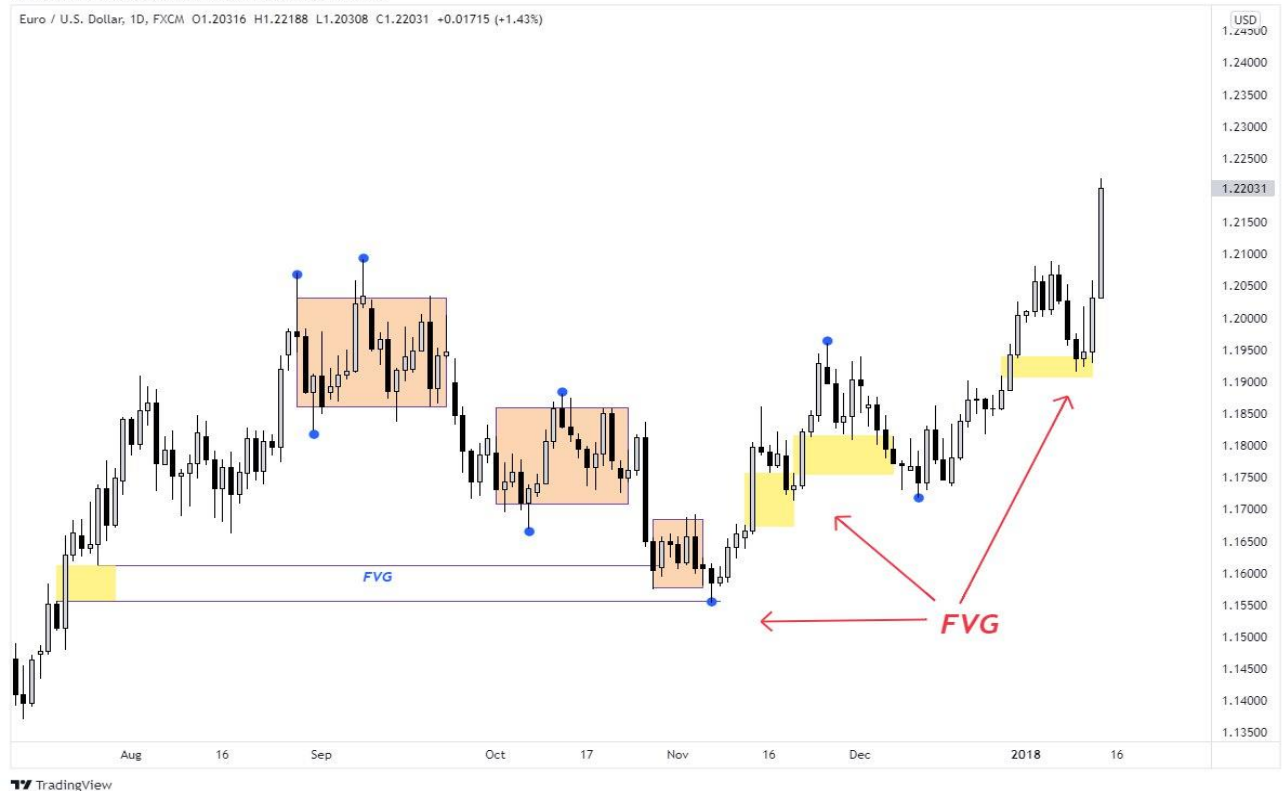

<https://www.tradingview.com/x/y74kR06q/>

The HTF liquidity gap is more important than the LTF liquidity gap (understand the liquidity gap as you understand liquidity) so something needs to fill the gap.

Hjsorot7 published on TradingView.com, Apr 29, 2022 16:36 UTC

Euro / U.S. Dollar, 1D, FXCM O1.20316 H1.22188 L1.20308 C1.22031 -0.01715 (+1.43%)

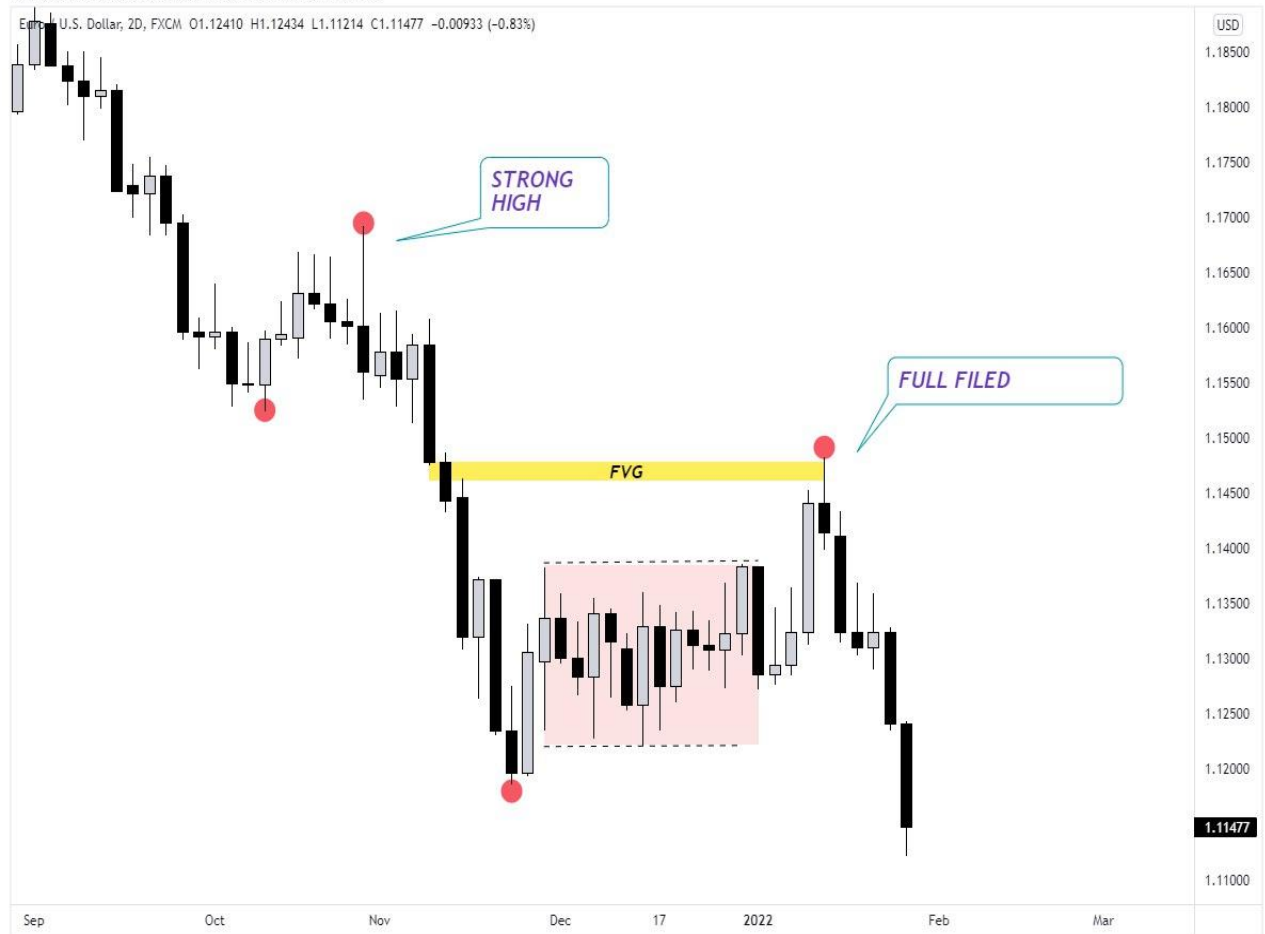

<https://www.tradingview.com/x/WHebf2jq/>

WHEN YOU SEE A **FVG FULL FULL** There is a high probability that the price will reverse

It depends on the importance of this FVG ($HTFFVG > LTF\ FVG$) (Use frames multiple time to SEE ALL Fvg)

Hjsorot7 published on TradingView.com, Apr 30, 2022 00:13 UTC

TradingView

<https://www.tradingview.com/x/vuqLfkhs/>

<https://www.tradingview.com/x/1AJEpLqz/>

Remember that FVG is just a liquidity gap. JUST LIKE LIQUIDITY (FILL>REVERSE)

Confirmation of price action

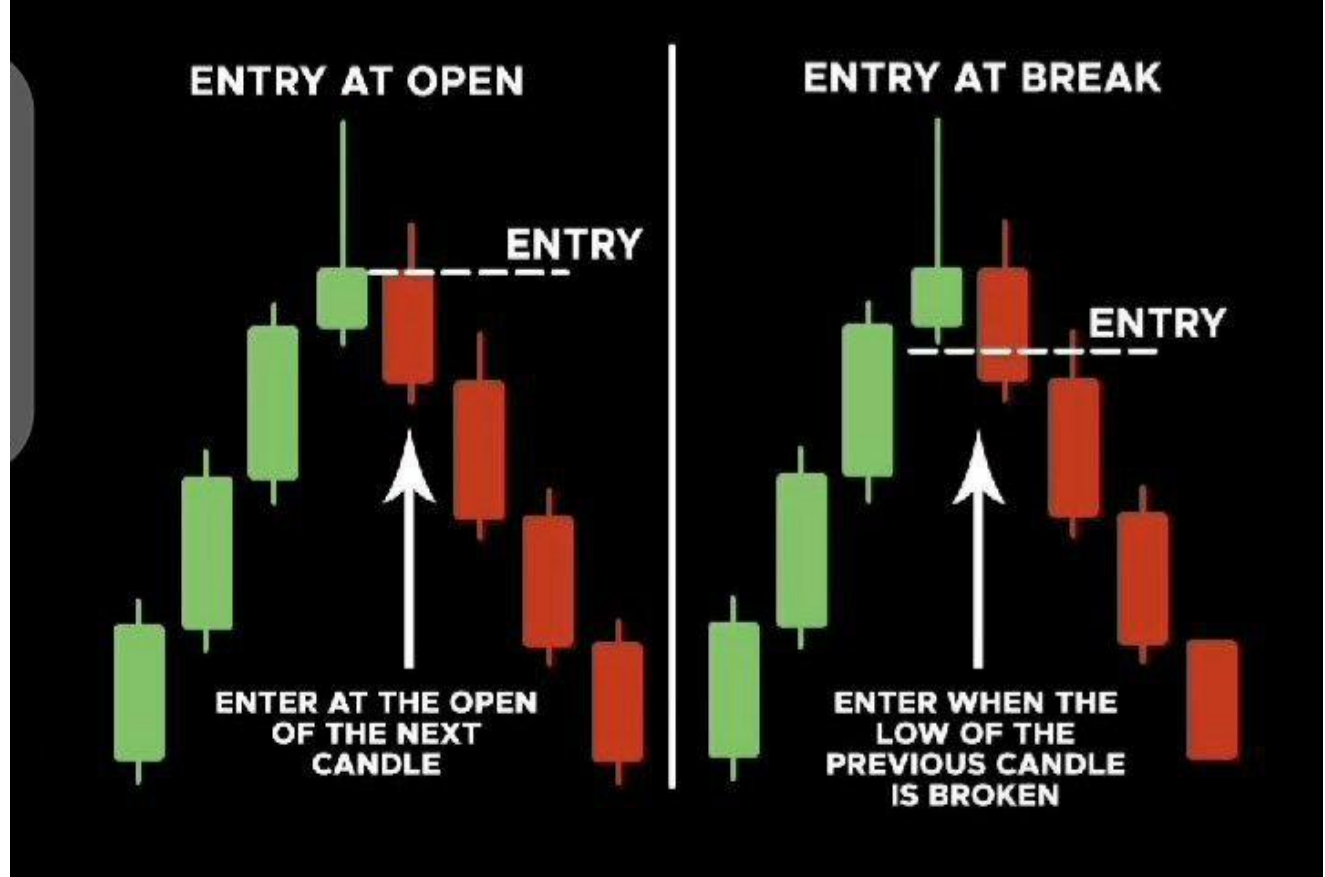

80% OF THE TIME SOMETHING CREATES A **FAKE** PRICE ACTION PATTERNS
 BUT IF WE KNOW WHERE IS THE RIGHT PLACE THAT USES THE SOMETHING TO CREATE A
REAL PRICE ACTION PATTERNS WE CAN USE THIS PATTERN FOR THE
 CONFIRMATION ENTRY

TradingView

Remember, when you lose, ask yourself... Are you responsible for a loss? No, I'm not responsible. I follow the rules. I'm not wrong. I don't make mistakes. I apply the rules.

But remember that you respect risk management and correctly

implement the strategy
