MALAYSIAN SNR EMPEROR

BY Mentor Abdiwahab Hussein Abdalle

Course outline

- 1. Basic SnR
- 2. Storyline
- 3. Setups
- 4. Engulfing
- 5. Trendlines
- 6. Money & Risk Management
- 7. Psychology

Basic of SnR

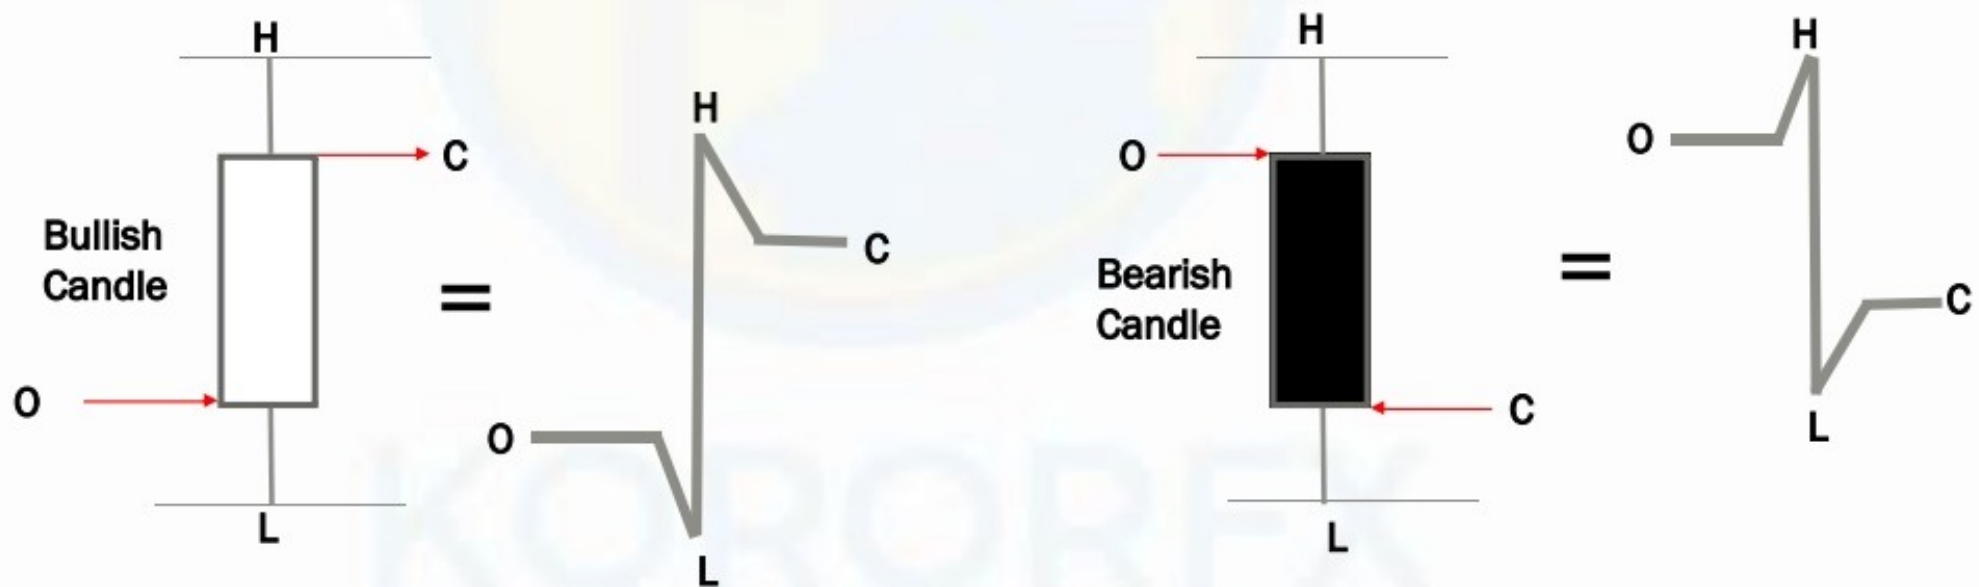

- **Support Levels** are considered as the price levels where demand is expected to be strong enough to prevent further price decline.
- **Resistance Levels** are price Levels where selling pressure is anticipated to be strong enough to impede further price increases

Technical analysis

- Basically, technical analysis is the study of price action using charting method, price chart is categorized into: Candlestick, Line and Bar Charts. But for the purpose of this course , our focus is on candlestick and line charts.

Candlestick chart

- Candlestick Chart displays information on OPEN, HIGH, LOW and CLOSE (OHLC) Prices on financial instrument. We use this information to see and understand price behaviour along a chart. (Time/price Relations).

The anatomy of Price Movement

Let's assume the fundamental truths about price movement;

- 1) If price is to move **UP** , it must first move **DOWN**
- 2) If price is to move **DOWN**, it must first move **UP**

Why this is so? Because the essence of every major player in the financial markets is to manipulate prices to his own advantage. They trade off the liquidity (**bulk orders**) at each level of *support and resistance* (**SnR**)

Line Chart

Line chart only displays information on candlestick's body in relative to the CLOSE and OPEN Prices per session. So, the line chart negates the candlestick's wicks.

Candlestick Chart VS. Line Chart

The Malaysian SNR

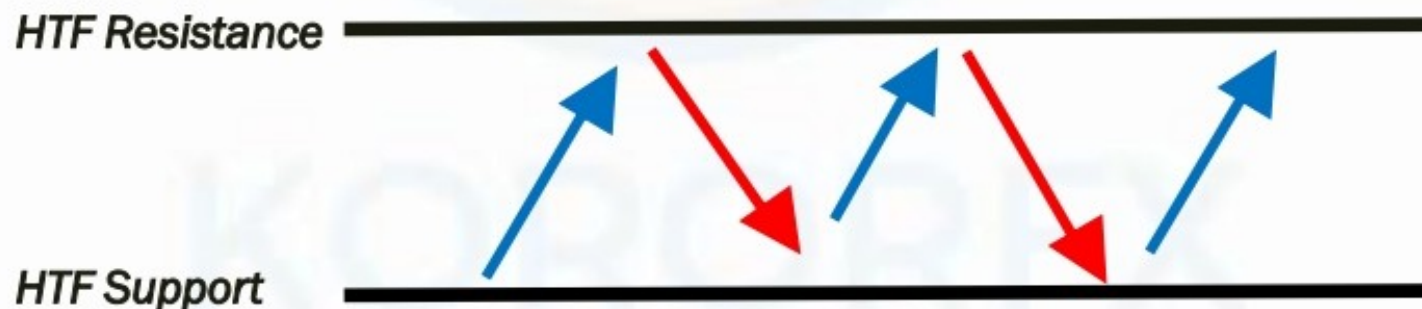

According to the Malaysian traders, there is a unique significance where price closes in previous session and opens in a new session of the price. This **OPEN-CLOSE** mechanism of price provides a trading pattern that is consistent and recursive with any tradable financial instrument.

The Malaysian traders ignore the conventional way of trading the support and resistance (SNR) Levels but rather a focus on the body of the Candlestick.

Marking SNR Levels

To mark the SNR Level, your focus is on the CLOSE and OPEN prices. You draw a line across the first candlestick's close to join the next candlestick's open. Ignore the wicks.

Price Travels from HTF level to another HTF Level!

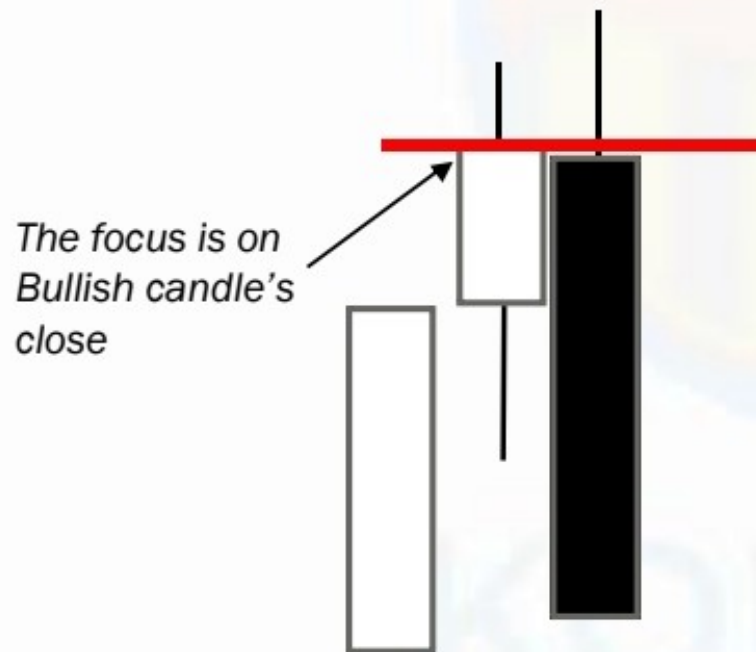

SNR (Resistance)

For resistance level, you draw line from the Bullish candle's close to join the next Bearish Candle's open and then extend the line forward. You'll mark as 'A' Shaped on line chart.

Candlestick chart

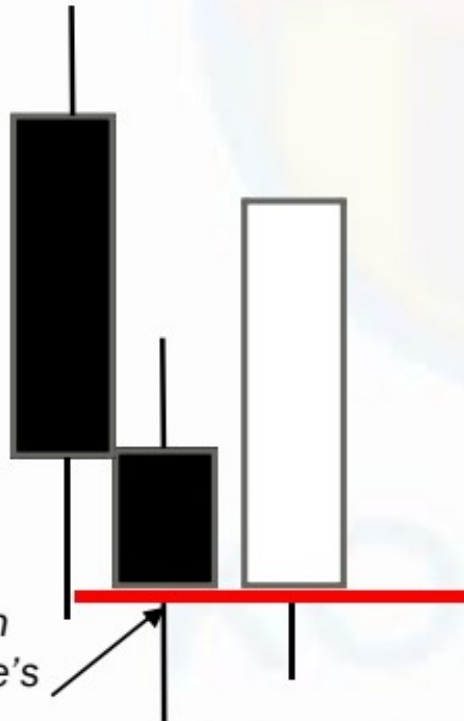

Candlestick chart

SNR (Support)

On Support Level, you draw a line across Bearish Candle's close to join the next Bullish Candle's open. This can be identified on a line chart as 'V' Shaped.

Candlestick chart

The focus is on
Bearish candle's
close

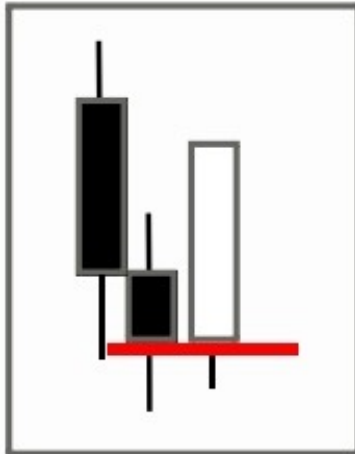

Candlestick chart

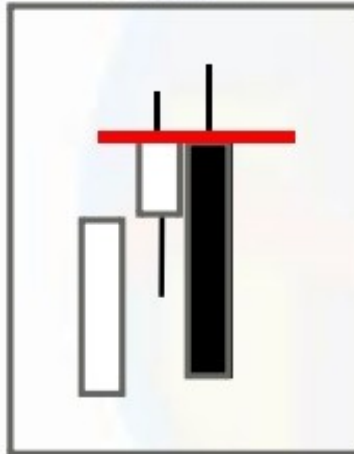

'V' Shaped

Types of SNR

Classic V

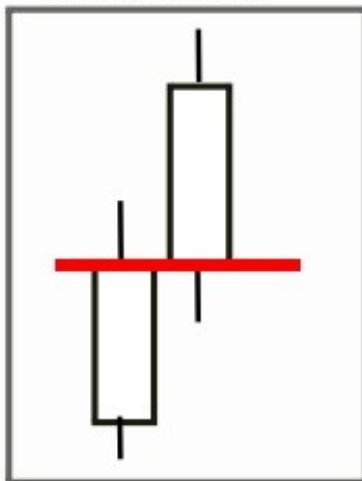

Classic A

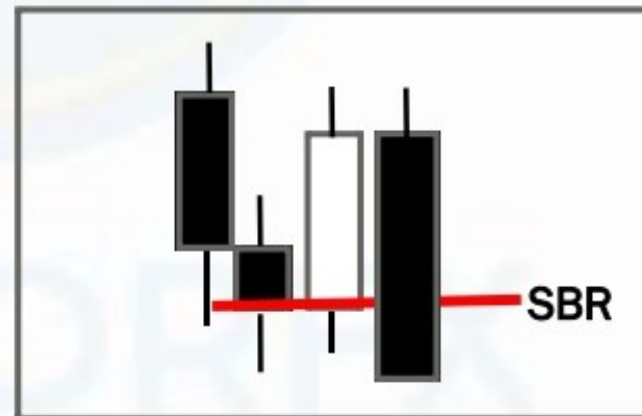

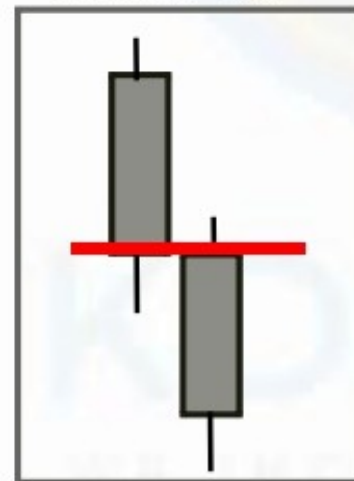

Resistance broken becomes Support

Bullish GAP

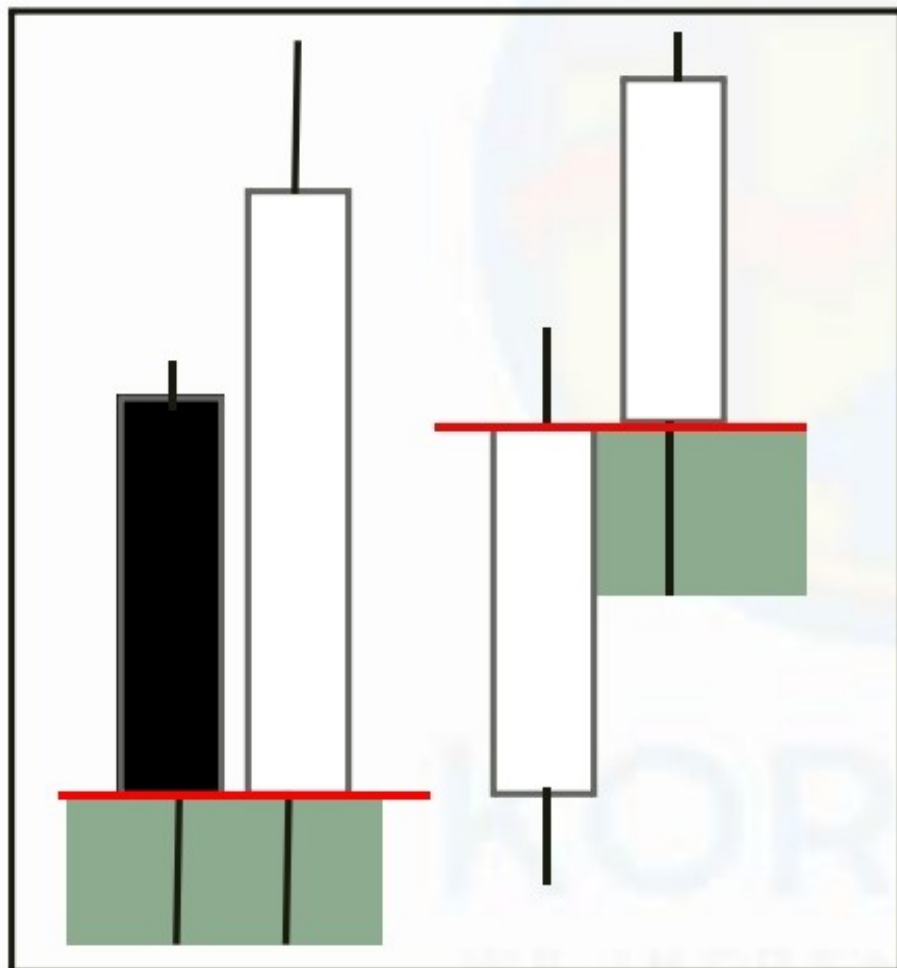

Bearish GAP

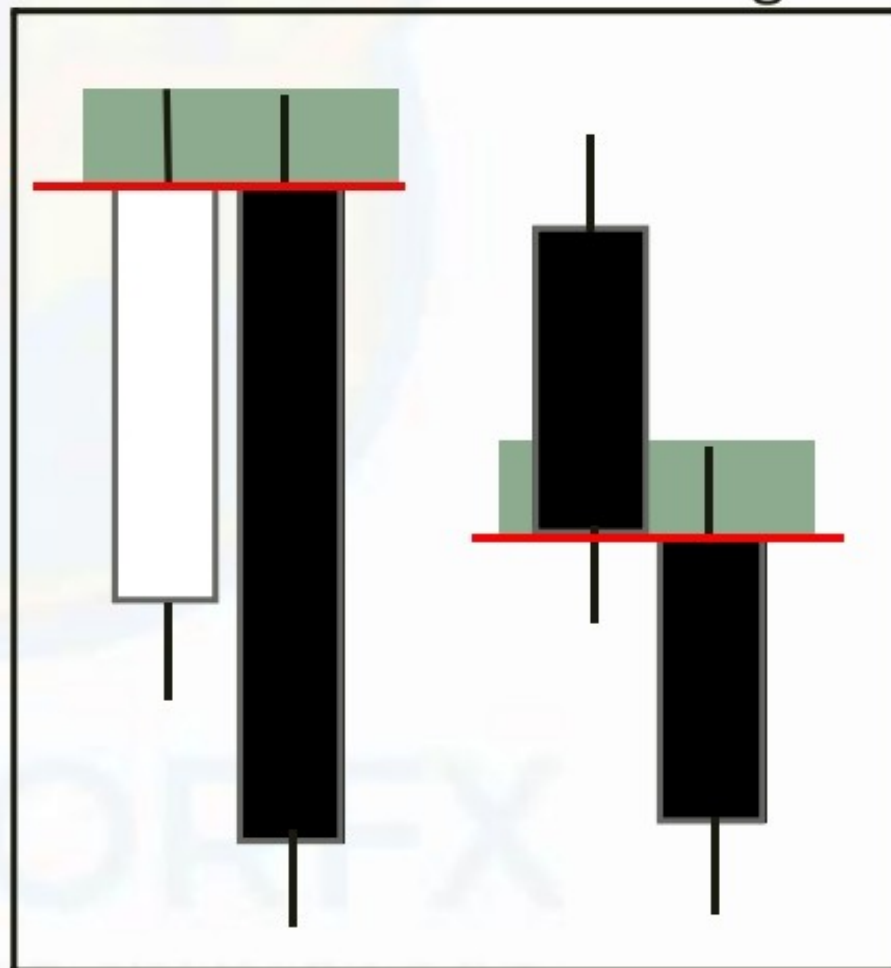

Support broken becomes Resistance

Support Zone VS. Resistance Zone

Support Zone - Buying

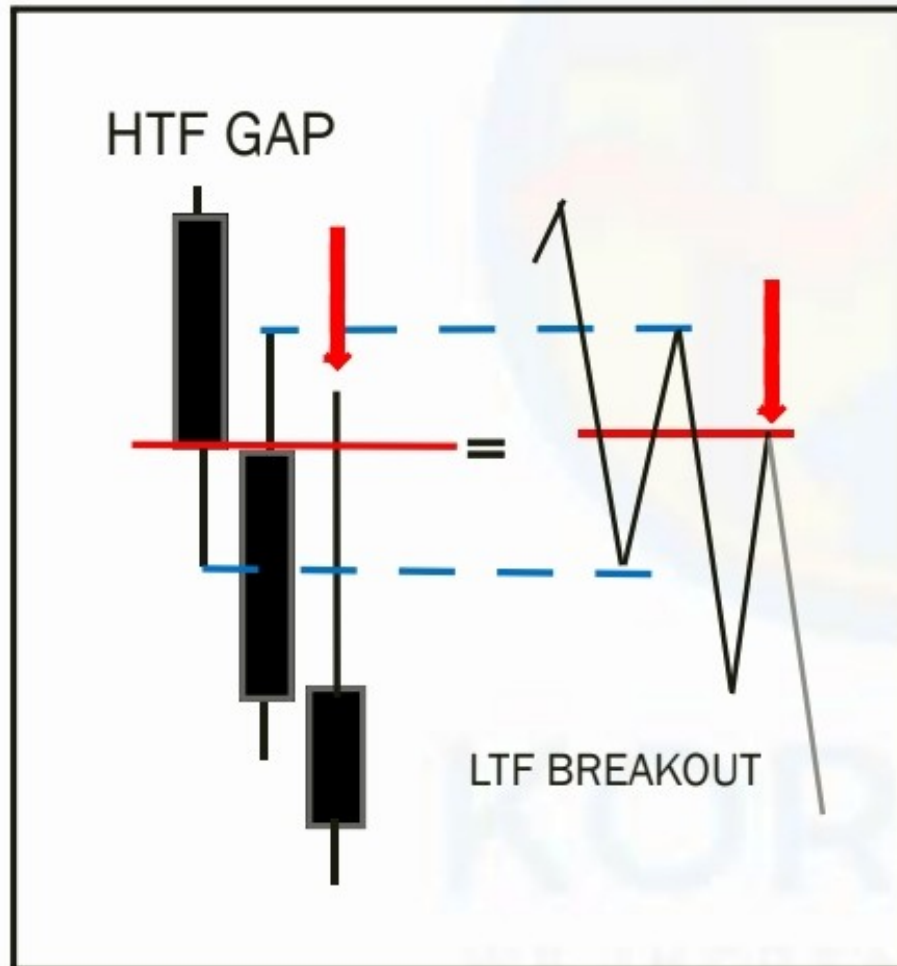

Resistance Zone - Selling

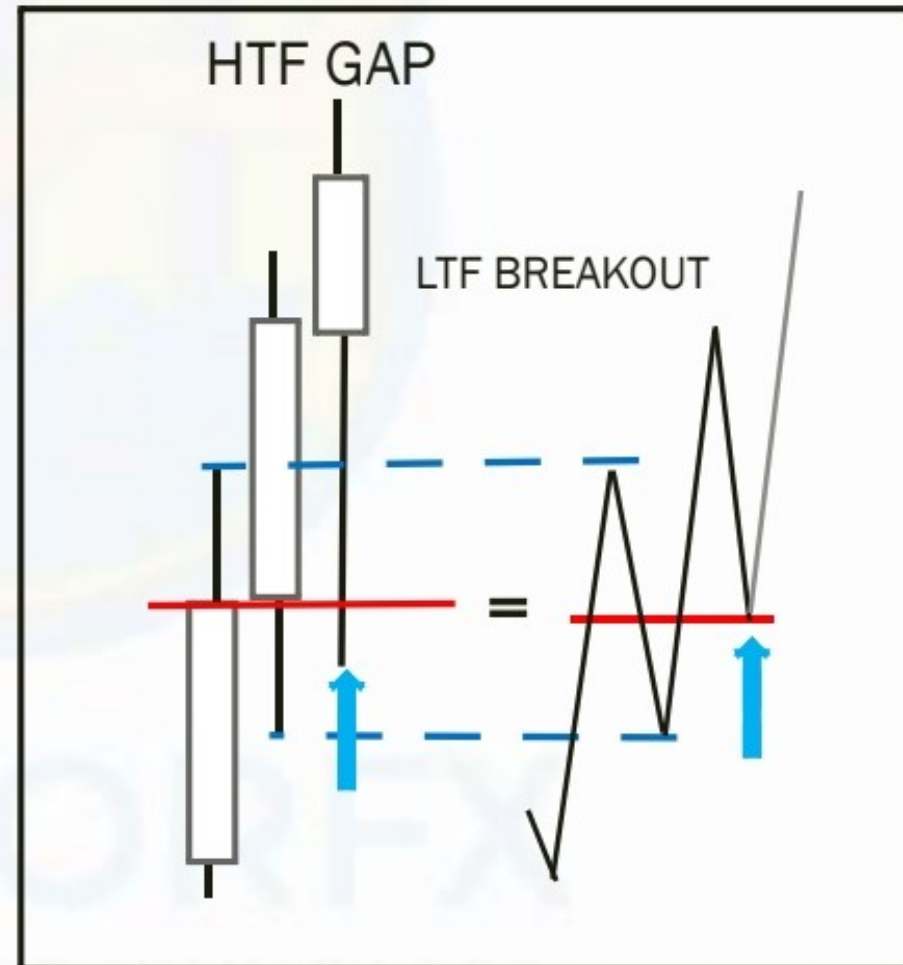

HTF GAP SNR (HIDDEN ZONE) = LTF BREAKOUT

SELLING

BUYING

Fresh and Unfresh SNR Levels

Fresh SNR is when a level is unbroken by candle's wick. If an SNR is broken by candle's Body, it is considered a fresh level.

Unfresh SNR is a level broken by candle's wick.

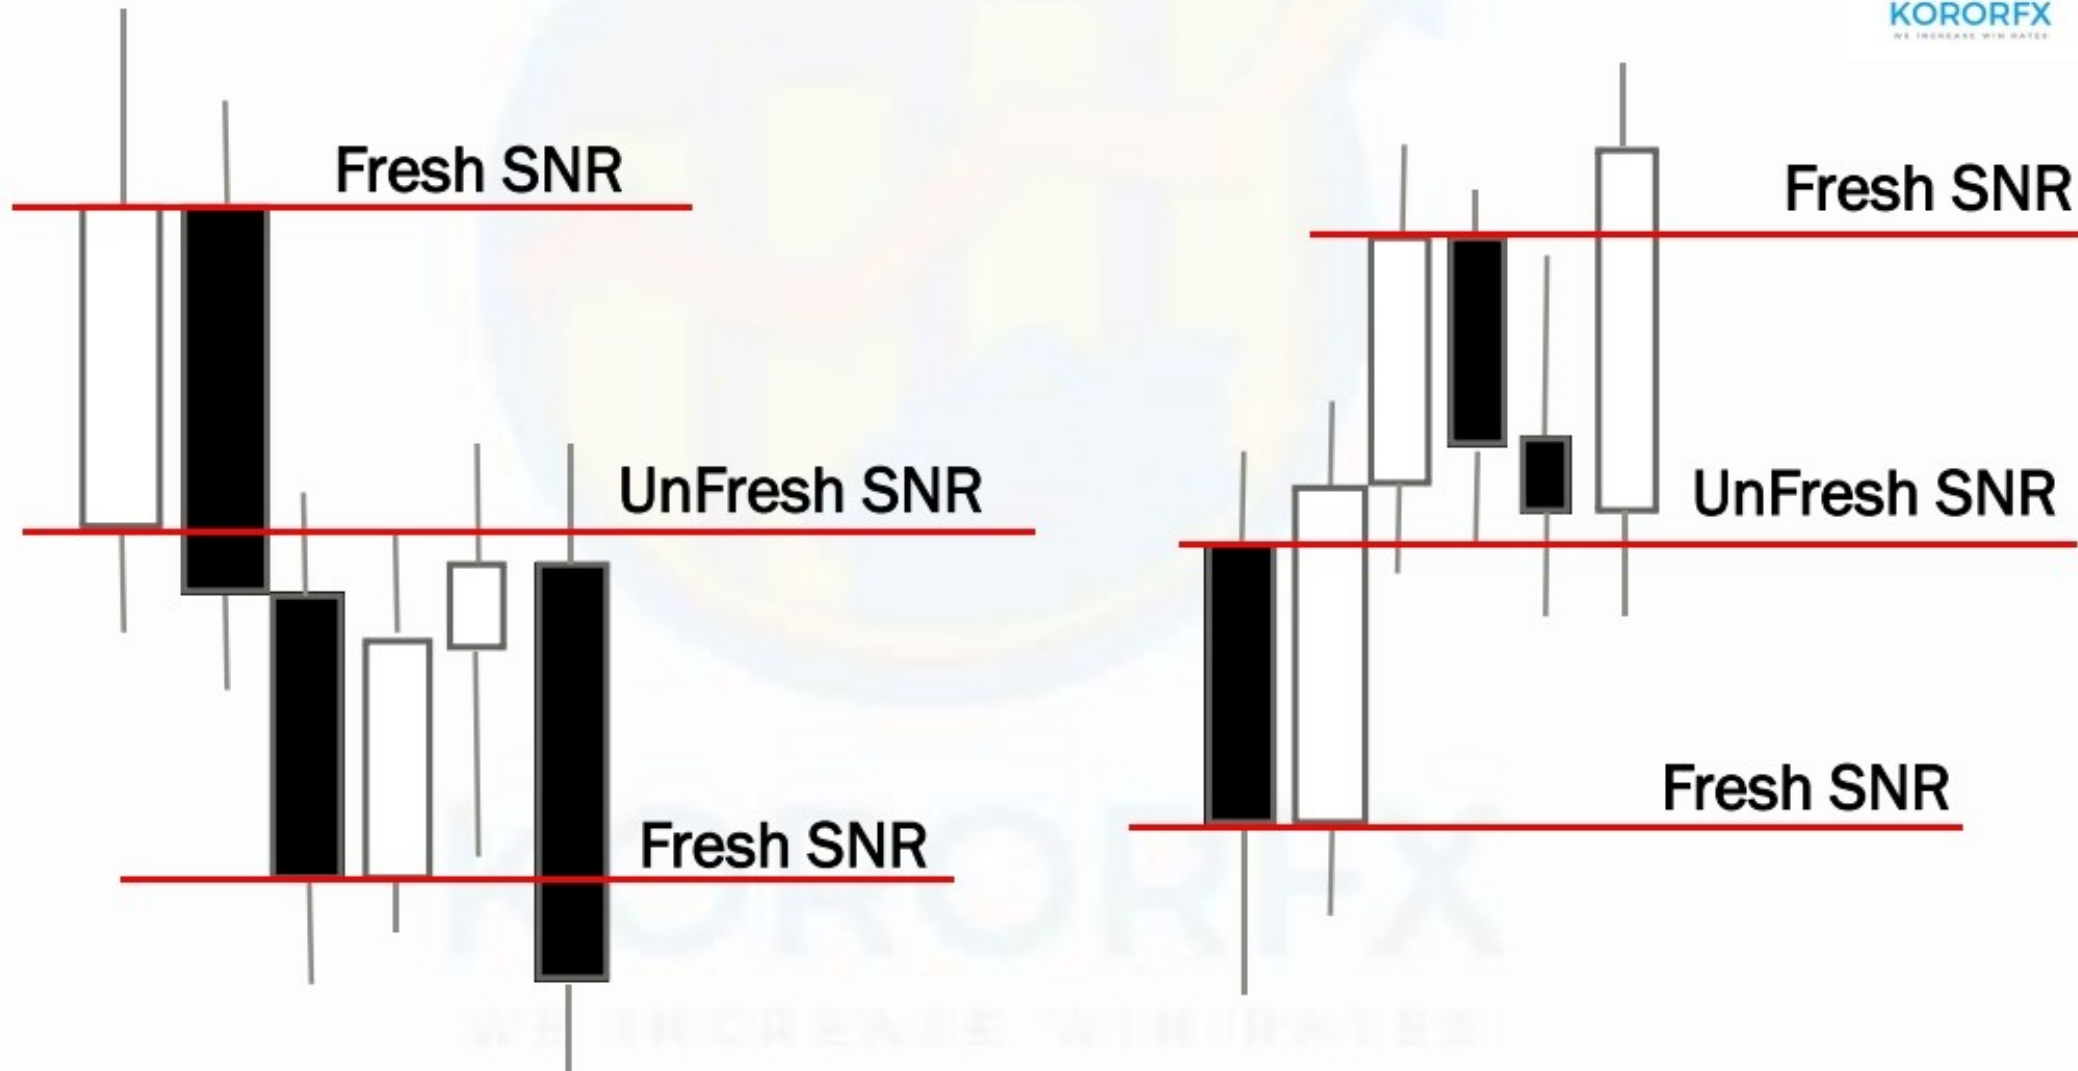

A fresh SNR is more significant than Unfresh one because it holds liquidity required by the institutions.

Price taps into fresh SNR and it rejects with a candle's wick. A body touch is not accepted.

As I said in my previous slide, price travels from HTF's fresh level to another breaking through the Internal swing highs and lows (LTF's SNR) and Finally to the other side of the HTF'S Fresh Level.

(Monthly to Monthly), weekly to weekly, Daily to Daily, H4 to H4, etc)

Fresh and Unfresh SNR Levels

Fresh and Unfresh SNR Levels Example

SNR + Rejection

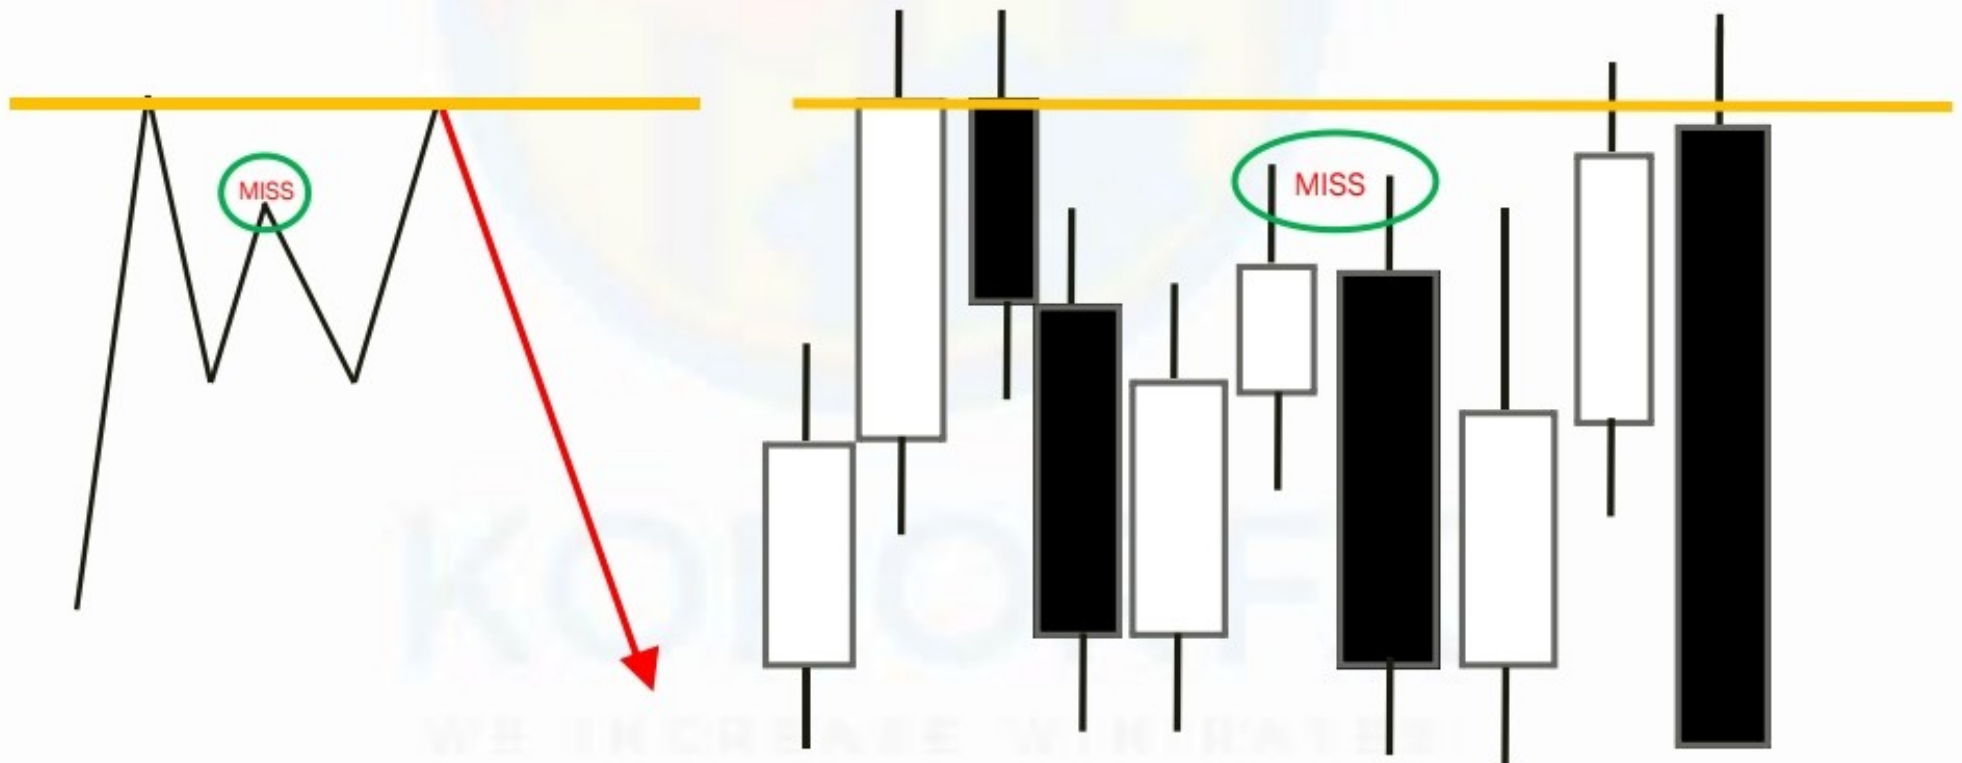

In order to trade an SNR Level, you need a **Price rejection** (touch of candle's wick) off the level.
By the Malaysian SNR Trading Rule;

SNR + MISS (\$)

What is a MISS?

- A **MISS**, According to the Malaysian SNR Traders, it's when an SNR forms and price moves away, but The following candles' wicks fail to touch the snr Level. The Miss validates an SNR Level.

Storyline (*Direction*)

A Storyline is a multi timeframe game of time and price changes in direction.
To identify storyline . We shall use 4 engagement rules ;

1st Rule : The Same Timeframe Levels

- For Direction we would use HTFs , Monthly, weekly and Daily
- Whatever starts on a timeframe must go to the same timeframe

For instance;

- What starts on the monthly must end on the monthly
- What starts on the weekly must end on the weekly
- What starts on the daily must end on the daily

Weekly SNR

Weekly SNR

Daily SNR

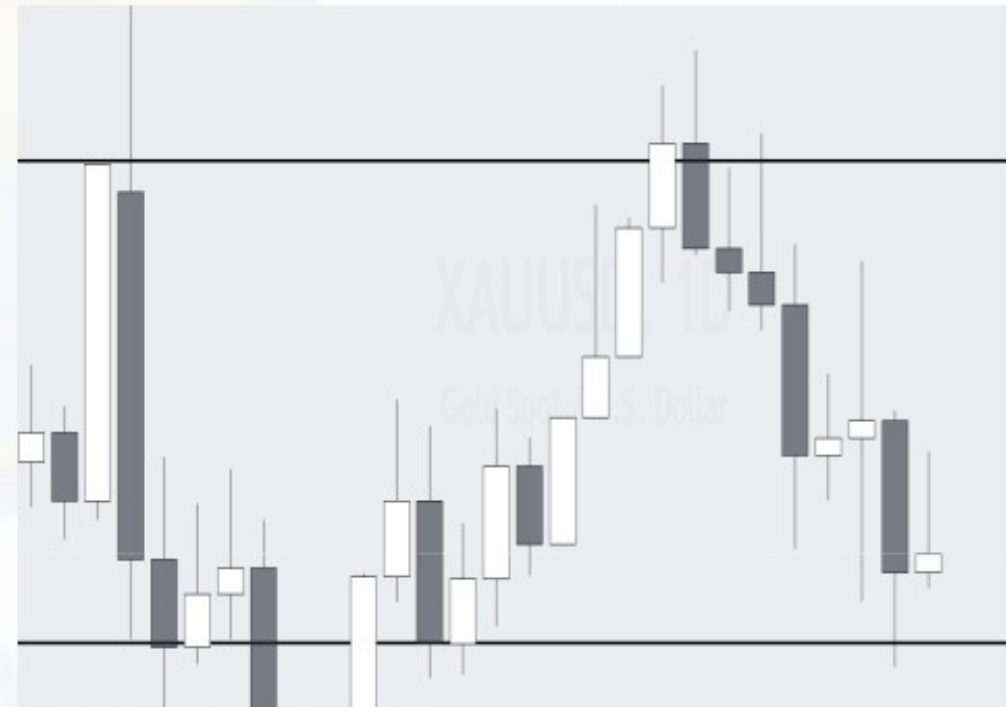

Daily SNR

Weekly to Weekly

Daily to Daily

Storyline (*Direction*)

2nd Rule : The start and End Of Storyline

- A storyline starts with a rejection (rejection is defined by a candle closed below Resistance or above support)
- Also STL Ends the same way of rejection.

This is termed as ;

- Monthly rejects Monthly (MRM)
- Weekly rejects Weekly (WRW)
- Daily Rejects Daily (DRD)

Monthly Rejects Monthly

Weekly Rejects Weekly

Daily Rejects Daily

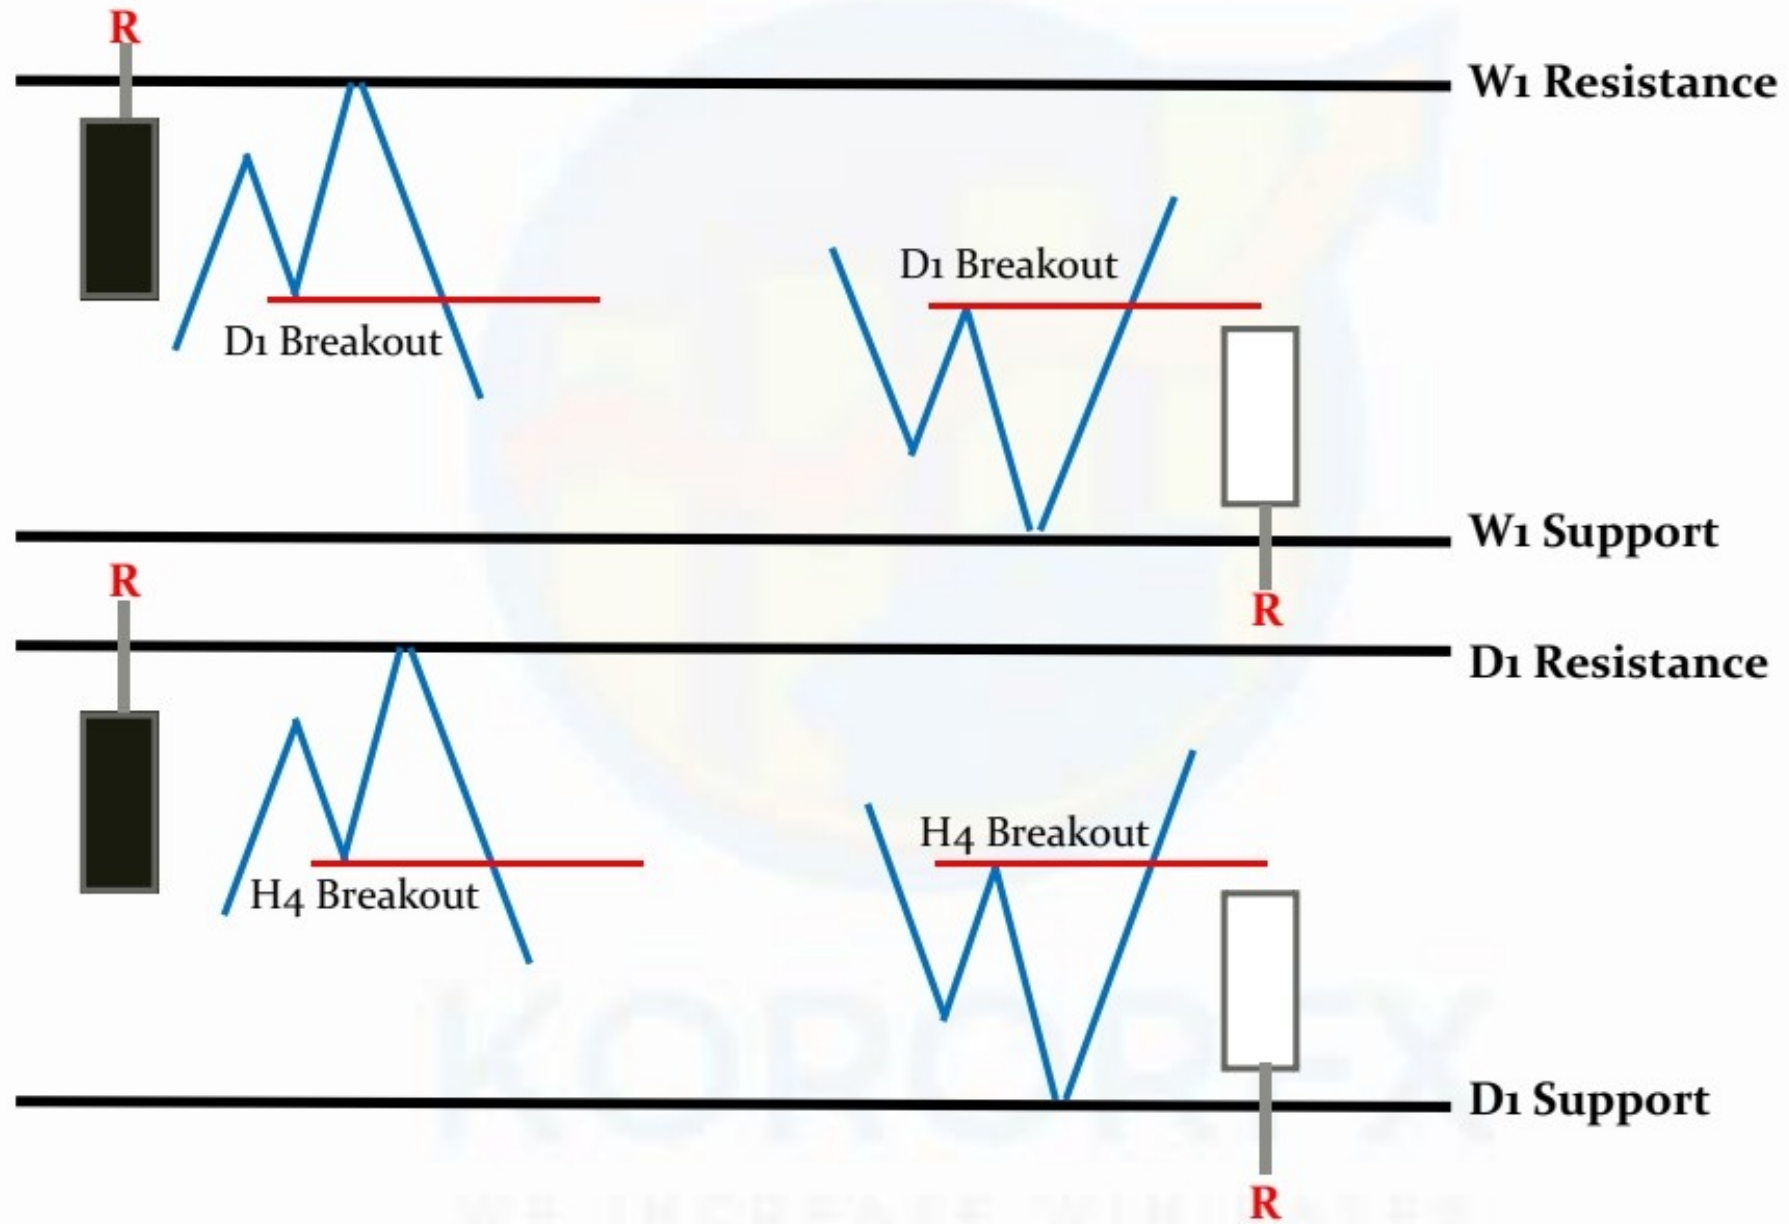

Storyline (*Direction*)

3rd Rule : Confirmation (Breakout)

- A Rejection is required as seen in rule 2, this should lead to a breakout on 1 or 2 timeframe lower breakout.
- If there is no clear breakout occur, there is no confirmation. You would have wait for the breakout.
- Find the next Level of resistance or support on the opposite side for your target.
- We will have two types of Breakouts; internal or External Breakout
 - Internal : BO level that was formed after the rejection
 - External: BO level that was formed before the rejection

Daily Rejects Daily

H4 Breakout (STL Confirmed)

Storyline (*Direction*)

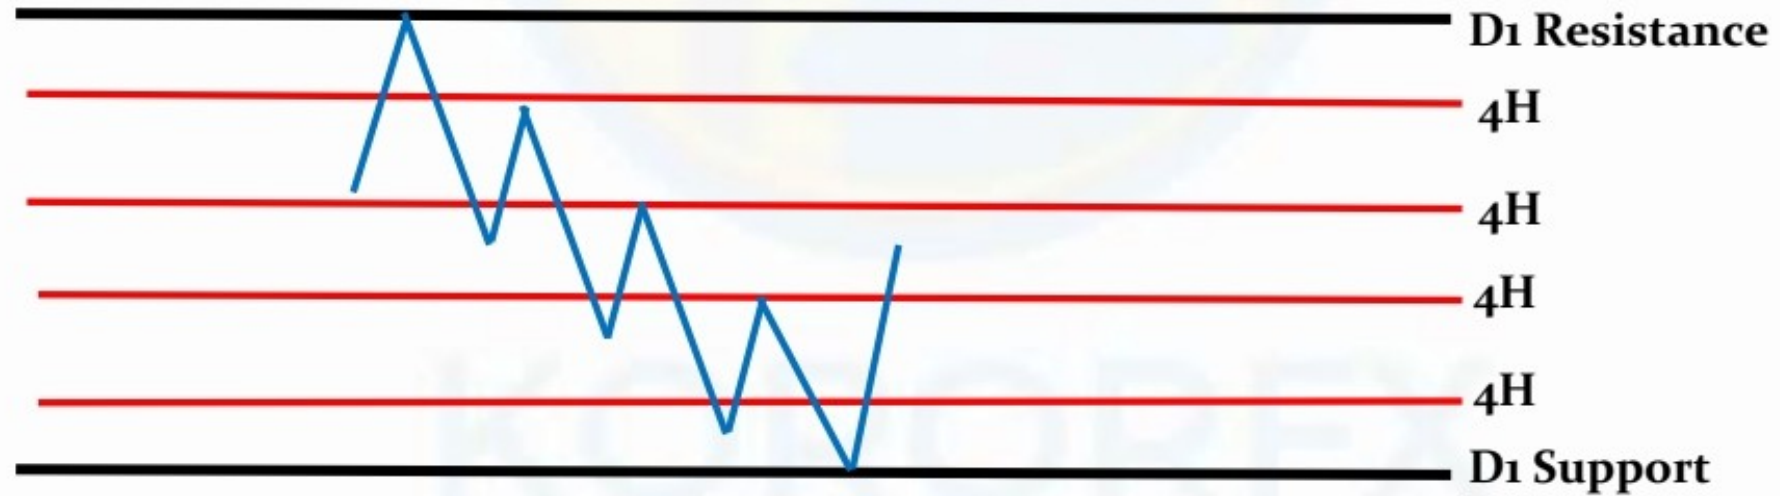

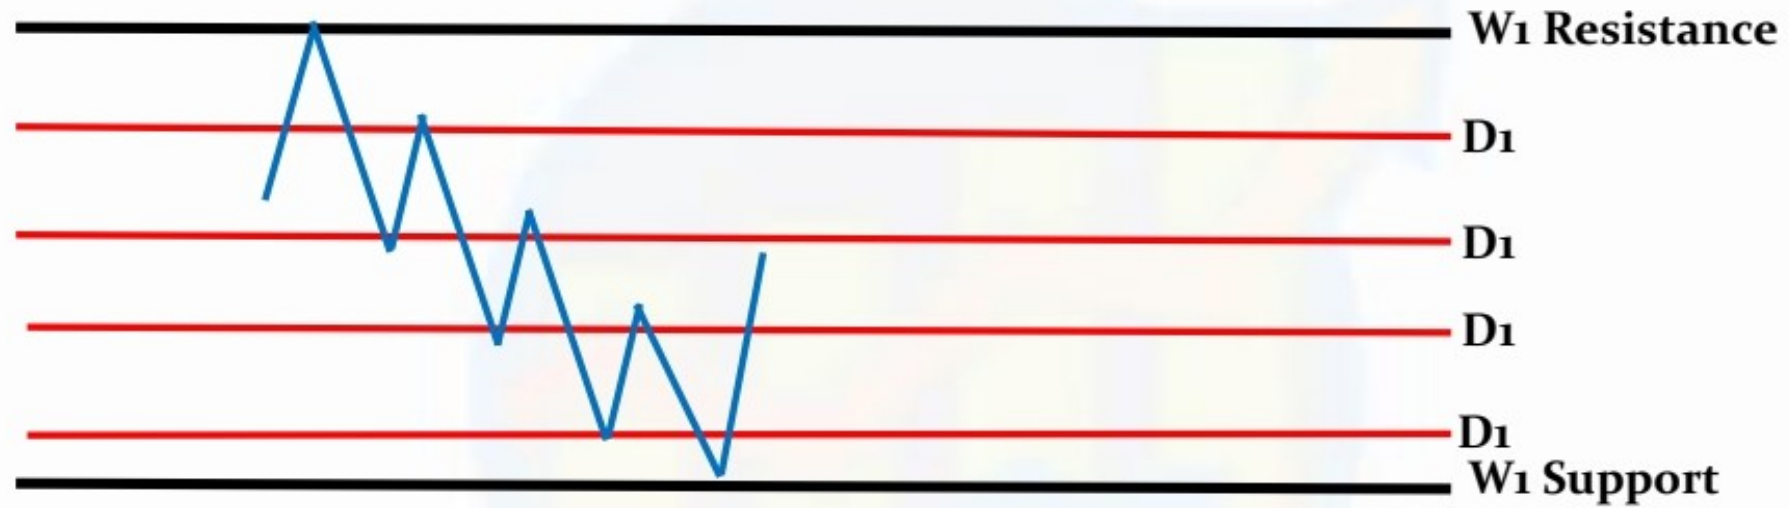

4th Rule : Roadblock (Retracement / Pullback)

- Roadblocks to a storyline are area of interests that are found in one TF Lower.
- Before price completes its storyline, it will be bouncing from support and resistance found in 1 TF Lower.

Example;

- On the weekly storyline, price will bounce on daily support and resistance
- On the Daily storyline, price will bounce on 4H support and resistance

.. RBs are price movements that are against the STORYLINE

Weekly to Weekly storyline with Daily Roadblocks

Approach and usage of Multi-timeframes for Storyline

Storyline & Confirmations		Roadblocks/Retracement/Pullback					
Rejection	Breakout	Monthly		Weekly		Daily	
MrM	Weekly/Daily	Weekly	↑	Daily	↑	4h	↑
WrW	Daily/4h	Weekly		Daily		4h	
DrD	4h/1h	Weekly		Daily		4h	
		Weekly	↓	Daily	↓	4h	↓
		Next Monthly		Next Weekly		Next Daily	

KORORFX
WE INCREASE WIN RATES

The Multi-timeframe Game!

Monthly – Not consistent for Direction

Weekly – Main Direction

Daily – Retracement/Roadblock for Weekly Direction

H4 – Confirmation/Roadblocks (Gap Level) for Daily and weekly direction

H1 – Very special because price precedes whether direction is valid or not.

Make sure it gives wick/gap candle.

M15
M5

Refinement Entries

Do enough Backtesting in order to find out the best timeframe that suits Your own personality.
Practice helps you to see your weakness and strength before you come to the battlefield.

Setups (*Entries*)

Setup 1 : High Risk (50/50)

Example;

- Price touches Daily Level, MTF/H4/H1, Set a limit 30pips

.. Proper way: in line with weekly.

- Bullish weekly storyline, look for Daily levels to buy from

Setups (*Entries*)

Setup 1 : High Risk (50/50)

Chart Example;

Price touches Daily Level: <https://www.tradingview.com/x/KPODFbSU/>

Then use MTF : <https://www.tradingview.com/x/6pKxcp1L/>

Set 30pips Limit: <https://www.tradingview.com/x/z36Eeml1/>

Setups (*Entries*)

Setup 2 (A) : Medium Risk (Rejection on the same Level)

Example;

- Daily reject Daily, then go H4 fresh level, refine to H1

Setup 2 (B) : Medium Risk (Two TF's Lower Breakout)

Example;

- Daily reject Daily, wait for H1 B0 (it can be internal)
- Weekly, wait for H4 B0, then refine to H1

.. Live Example on the chart

Setups (*Entries*)

Setup 2 (A) : Medium Risk (Rejection on the same Level)

Example;

- Daily reject Daily, then go H4 fresh level, refine to H1

DRD: <https://www.tradingview.com/x/aLwmiOyZ/>

H4 Fresh Level : <https://www.tradingview.com/x/r1wj8rvp/>

H1 refined zone: <https://www.tradingview.com/x/awfQNYIk/>

KORORFX
WE INCREASE WIN RATES

Setups (*Entries*)

Setup 2 (B) : Medium Risk (Two TF's Lower Breakout)

Example;

- Daily reject Daily, wait for H1 B0 (it can be internal)
 - Weekly, wait for H4 B0, then refine to H1
- DRD : <https://www.tradingview.com/x/gafTXbrV/>
- H1 B0: <https://www.tradingview.com/x/2rsLI0p3/>

KORORFX
WE INCREASE WIN RATES

Setups (*Entries*)

Setup 3 : Low risk (one TF B0)

Example;

- Wait for Storyline to Start and Pullback
 - Daily reject Daily + H4 B0, Pullback to QM (as Confirmation) or Apex (Limit)
 - Also H4 MTF H1
 - H4 QM is preferably fresh, but not a requirement.
 -
- .. Live Example on the chart

Setups (*Entries*)

Setup 3 : Low risk (one TF B0)

Example;

- Wait for Storyline to Start and Pullback
- DRD: <https://www.tradingview.com/x/gZK6c5Yh/>
- H4 B0 : <https://www.tradingview.com/x/DPiuerWa/>
-
- Pullback to QM (as Confirmation) or Apex (Limit)
- <https://www.tradingview.com/x/Lm39xV3j/>

Setups (*Entries*)

Setup 3 : Low risk (Decisional Level)

Example;

- 4h touches Daily or weekly fresh level, look for the level that has been made before the touch
- If it makes a new candle, you mark that until it breaks
- After break, refine to H1 fresh or QM (QM no need for fresh/Unfresh)
- .. Live Example on the chart

Setups (*Entries*)

Setup 3 : Low risk (Continuation)

Example;

- Daily Storyline, look for the last H4 fresh, check if align with H1 fresh, if h4 not fresh, look for the next H4 fresh, check if align with H1 Fresh (must not be too far)
- .. Live Example on the chart

Setups (*Entries*)

Setup 4: Low Risk (Confirmation)

Example;

- Use only with medium risk Setups
- Use it on H4/H1 Levels only
- When level is touched, drop to m1, connect nearest to A/V levels on line chart
- After break of TL, start Layering (10 pips range)
- SL 20 Pips above or below the key level
- also use 5m QM
- You can use it on Low risk setups if it's not extreme
- .. Live Example on the chart

The 4 Malaysian SOP That I always use

Storyline : W1/D1/H4/H1 (STL Confirmation = 1 or 2 TFs' BO)

SETUP 1: - A+ : 1TF BO (DRD+1 or 2 TFs' BO+QM entry (with confirmation : CE) or Apex ,play MTF)

SETUP 2: - A : Continuation (STL Confirmed+4h Fresh SnR+ 1h Fresh +Entry with Confirmation (CE)

SETUP 3: - B+: (DRD+1 or 2 TFs' BO+30M Pullback+30m internal BO+QM or Apex entry +play MTF)

SETUP 4: - B : H4 Eg/Ef + M30 TC + M5 Confirmation (Eg/Ef)

Engulfing Pattern

What is an engulfing candlestick pattern?

Engulfing candlestick patterns are comprised of two bars on a price chart. They are used to indicate a market reversal. The second candlestick will be much larger than the first, so that it completely covers or 'engulfs' the length of the previous bar.

There are 2 categories of engulfing;

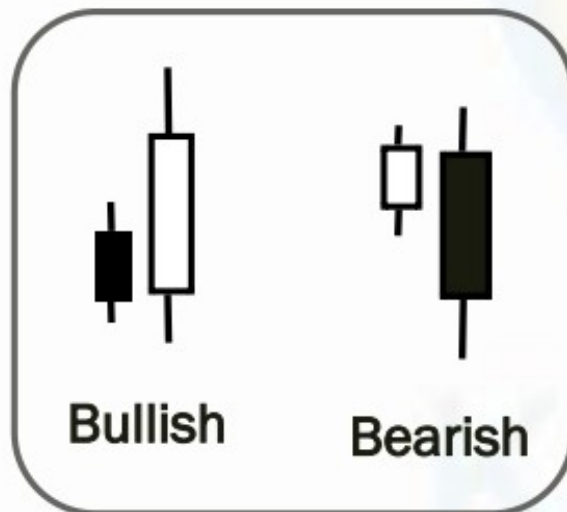

Bearish Engulf (Sell)

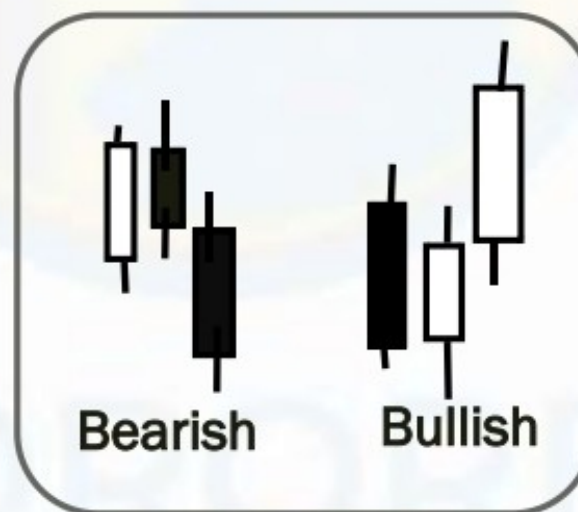

Engulfing Pattern

3 types of Engulfing

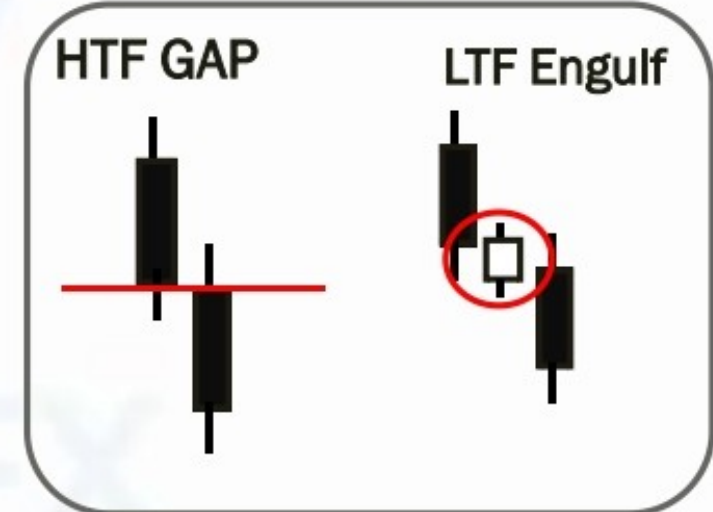

1 : - Perfect Engulfing

2 : - QM Engulfing

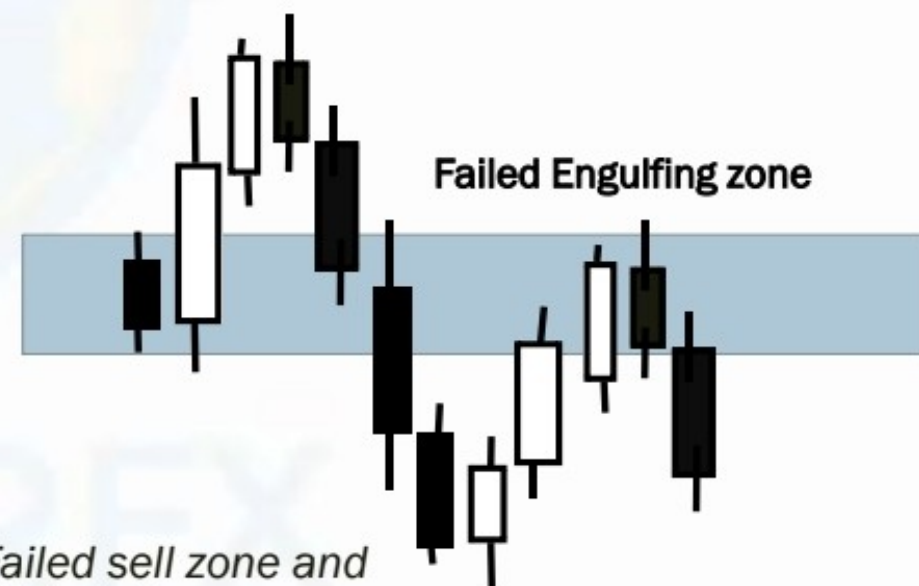

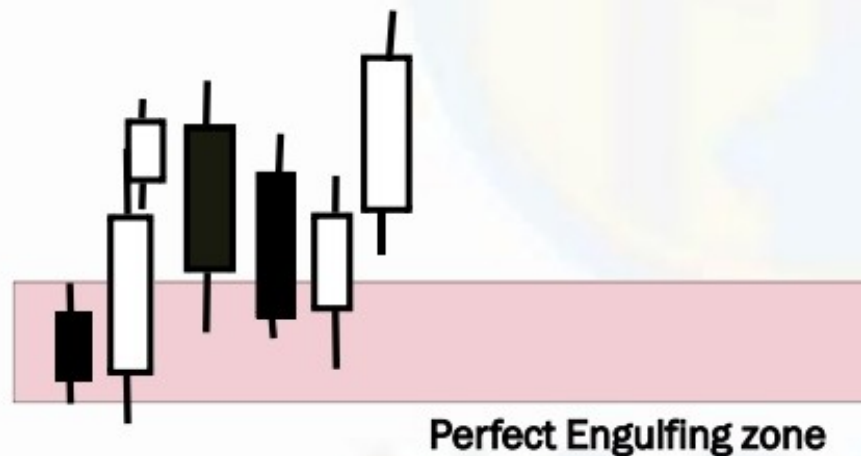

3 : - Hidden Engulfing

Engulfing Pattern

Engulfing Zone

There are 2 Engulfing zones; 1- Perfect Engulfing zone (PEZ) and 2- Failed Engulfing zone (FEZ)

*NB: If Bullish Engulfing is broken it becomes Engulf Failed sell zone and
If Bearish Engulfing is broken, it becomes Engulf Failed Buy zone*

Engulfing Pattern

Marking Engulfing zone

First choose only 2 timeframes to mark out Engulfing zones; I always use 2TF's for identifying buying zone or selling zone; **Timeframe:** M30 - M5, H1 - M15, or H4-H1

My SOP for marking Engulf zone

- ✓ Identify engulfing zone in TF 1
- ✓ Mark the engulfing zone then Go to TF2
- ✓ Find **Fresh** A/V or Gap Levels inside the EG zone and mark them
- ✓ Wait for price to come to any of the marked levels and give a CC candle (rejection candle)

CC = Confirmation Candle

Engulfing Pattern

EG + SNR (A-V-Gap-RBS-SBR)

We will always use Engulfing (EG) or Engulfing failed (EF) as or potential zone of buying or selling. Setups will always be based on EG TO EG, EG TO EF, EF TO EG.

My SOP for marking Engulf zone

- ✓ Mark EG or EF Zone
- ✓ Wait for price to go inside that zone then you have to dropdown to 1 TF Lower, look for current market price creating EG.
- ✓ Mark this zone EG then dropdown to 1 TF lower for Entry
- ✓ Find (EG TO EG), (EG TO EF), or (EF TO EG) then Confirm your Entry

Engulfing Pattern

Golden Confirmation Entry (Special Entry by KororFX)

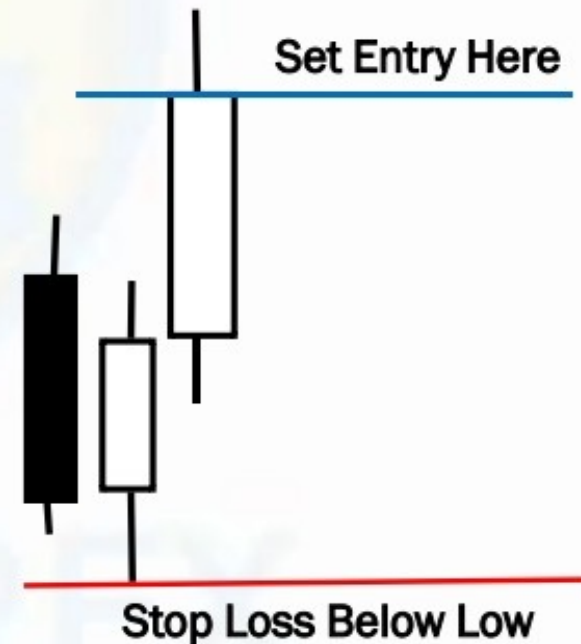

This GCE is based on Special time for market entry, I always use UK Time zone (UTC-1) for my trading so my Golden formation timing are for UK Time. (so please relate it to your local time)

London Session: 8:00am – 10:00am UK Time

New York Session : 1:30pm – 2:30pm UK Time

Definition of Golden Confirmation :

Very simply put, the golden confirmation I use is the engulfed candle entry. We wait for the new candle to completely engulf the past few candles, and all their bodies/wicks.

Engulfing Pattern

Golden Confirmation Entry (Special Entry by KororFX)

In this strategy, we apply this GOLDEN CONFIRMATION on the 5 min timeframe. However, it can be applied to any time frame so feel free to adapt it to anything you require.)

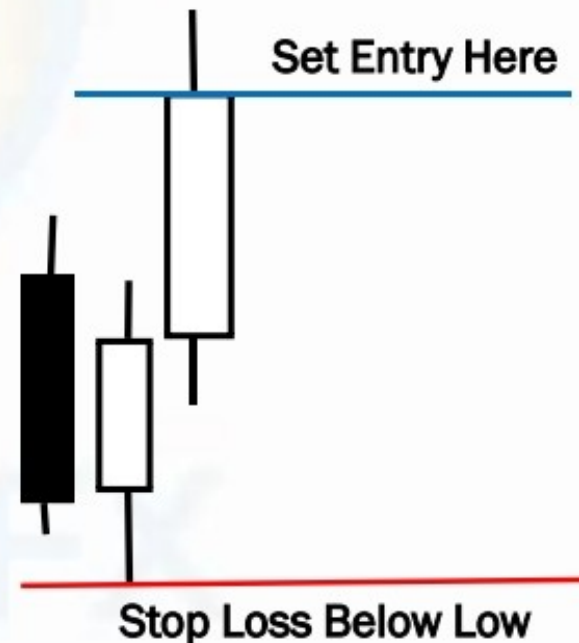

This of course will vary and never look as perfect as this but the main thing is this:

-It MUST engulf a good selection of candles before completely

WHY DO WE ENTER LIKE THIS? :

- ✓ It gives confirmation that we are moving in that direction
- ✓ It increases our win rate if applied correctly
- ✓ Although it does reduce our RR, in the long term its worth it

More Live Examples on Chart

Engulfing Pattern

Trading Notes for Engulfing

- ✓ Zone is just a zone
- ✓ Price takes time if it wants to reverse
- ✓ If price wants to reverse, there will be a step by step ladder, an increase and decrease
- ✓ focus on Current Market Price (CMP)
- ✓ Setup must be based on Engulfing or Engulfing failed
- ✓ Don't rush for entry, it's not like that the price is entering the zone you just want to enter.
- ✓ wait for confirmation and be patient to check where is Current Market Price
- ✓ always use 2 or 3 timeframes
- ✓ Don't dropdown to a lot of Lower TFs, it will be lot of noises.

Trendlines (Mapping The Trend)

Definition

TRENDLINES are basically an angled SNRs. That is, it maps out the direction of SNRs in Trending Market.

This tool is used for;

- 1) To determine where there is an uptrend or downtrend
- 2) To determine the point of entry/TPs

How to set the Trendlines?

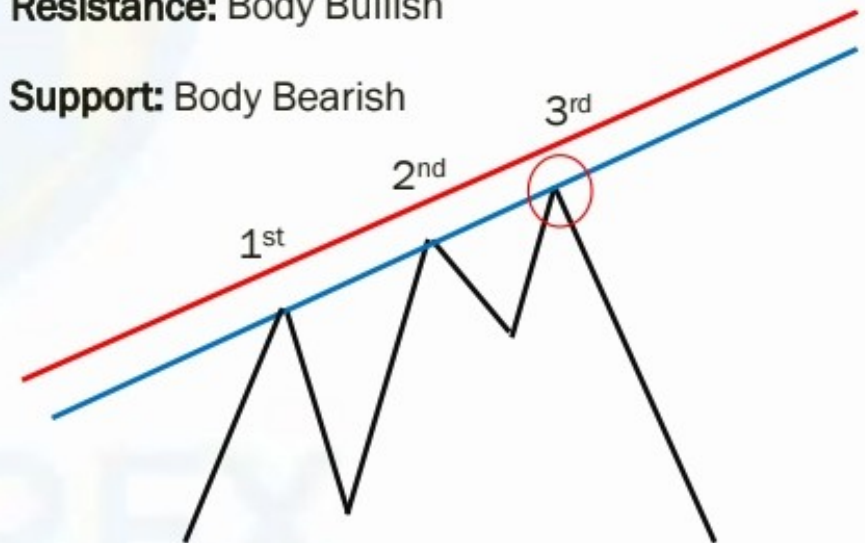

- 1) open ray right =(Click TL > Properties > Ray right)

- 1st Point TL = YES
- 2nd Point TL = NO (Ignore)
- 3rd Point TL = YES

Hooking Method: - without Opening Line Chart

Resistance: Body Bullish

Support: Body Bearish

More Live Examples on Chart

Trendlines (Mapping The Trend)

The Objective of Trading SNR+Trendline is:

TRENDLINES are basically an angled SNRs. That is, it maps out the direction of SNRs in Trending Market.

- 1) Identify an SNR Level (Fresh or Unfresh)
- 2) Find a Trendline that connect with SNR (Marked SNR)
- 3) Enter at Trendline touch (Confluence)

Note : Trendline doesn't apply a GAP SNR (except when refined into LTF Engulfing)

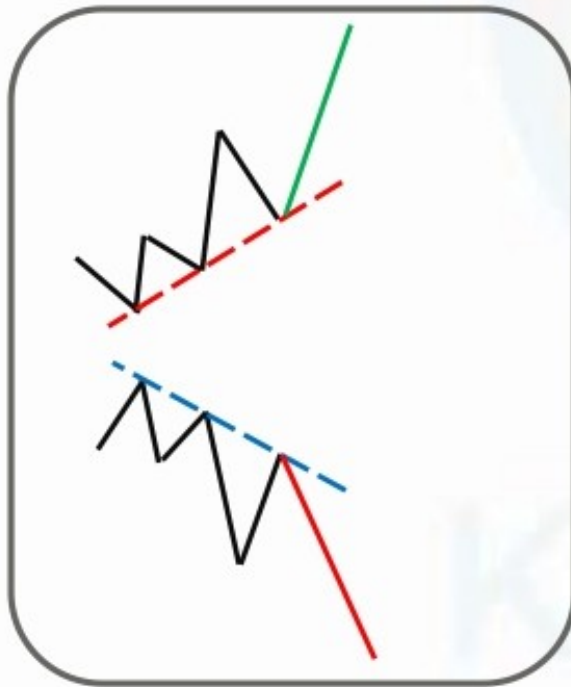

More Live Examples on Chart

Trendlines

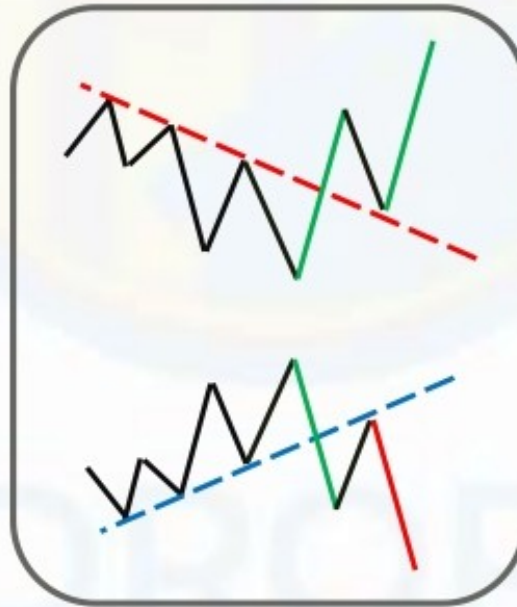

Types of Trendline

I always apply in my trades only 6 types of Trendlines;

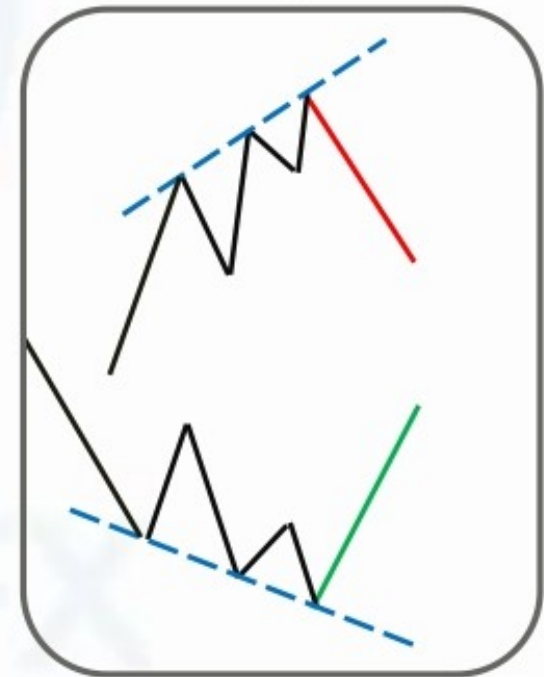

1. Regular

2..Breakout

3. Divergence

The 5 action SOP

1.) – Marking The Zone

- Use a HTF Engulfing setup
- Draw an SNR line across the CS/C.O extending to the right

2)- Price rejection

- Price taps into EG/EF zone with a wick
- An SNR touch with a close off the level
- Price rejection candle – Engulfing or Pin Bar.

3)- Price Breakout

- HTF Refinement:** Go down one time lower.
- LTF Breakout pattern with EG Zone inside HTF Zone

4) Confluence Point:

- Confluences:** Trendline + SNR Convergence

5)- Entry Confirmation

- Retest of LTF EG Zone
- Multiple re-entry using continuation pattern
- Place stoploss at lower low (Buying) or higher high (selling)

Money & Risk Management

Account Management

- Always be consistent in my action
- Have multiple accounts: Don't just work hard, work smart!
- Buying account
- Selling account
- Trail/error account
- High risk account

Buying		Selling		T/E	High Risk
Start : \$1000		Start \$1000			
Profit \$300	Draw : 50%	Profit \$500	Draw : 50%		
\$1150		\$1250			
Total Net earnings: +250 +250					

Money & Risk Management

Goal Setting

To grow \$4000 in 3 months;

$$\frac{4000}{3} = \$ 1333.33 \text{ Per Month}$$
$$= \$333.3 \text{ Weekly profit}$$

Money & Risk Management

Goal Setting

Monthly	Weekly	Target/week	Using % to increase account			
Oct 19 \$1333	1	\$333.25	2%	3%	4%	6%
	2	\$333.25	4%	6%	8%	12%
	3	\$333.25	6%	9%	12%	18%
	5	\$333.25	8%	12%	16%	24%

Monthly	Weekly	Target/week	Using % to increase account			
Nov 19 \$1333	1	\$333.25	2%	3%	4%	6%
	2	\$333.25	4%	6%	8%	12%
	3	\$333.25	6%	9%	12%	18%
	5	\$333.25	8%	12%	16%	24%

More Live Examples on Chart

Money & Risk Management

Key Notes:

- If target is too high, low the target
- Don't allowed, anything 200% is very bad and dangerous
- Forget my capital! Focus on (Margin %) instead
- Margin must be between 300% to 500%

More Live Examples on Chart

Psychology

Why Most Traders Lose?

What you have just learned is that technical analysis for only 10% of trading.

The rest is made up of psychology and system, or 'how you trade'. If you trade like a pro but never received sufficient psychology training, you will continue to lose your money.

"Trading is reflection of you."

1. Mentality

- Whether you think positively or negatively every day
- Do you have a stable emotional state?

2. Human behaviour

- Do you want to be wealthy or consistent?

More Live Examples on Chart

Psychology

System

Trail

- Only use one technique is enough
- Adjust (Learn)
- Increase your practice time. Backtest on a regular basis.

System

- Repetition of the good, avoidance of the negative

Risk & Rewards

Risk : The amount of money we are willing to lose.

Reward: the Amount of money that we'd like to make.

Risk Reward

1:5

Example:

Stop Loss: 40pips
Take Profit : 200Pips

More Live Examples on Chart

Psychology

The secret to Emotional Control

From this: Daily Problem

Example; Debt, work, family, own self, politic, less friends, time

Effect: Always think negative

- To this; Fresh your mind, body, soul

Example;

Mind: Tea time, sharing knowledge, reading book, make friends, playing games etc

Body: Rest, exercise, Diet, stop smoking etc

Soul: Pray/prostration, enjoy nature, listen quran, listen music

Effect: Calm, relax & positive

Calmness is the cradle of Power!
