

Confirm with fvg 0.5 - 0.45 and fibo circle 0.5 - 0.45. Focus on these two numbers as the main ones.

Leaving a long tail has a very high chance that the graph will continue to fall.

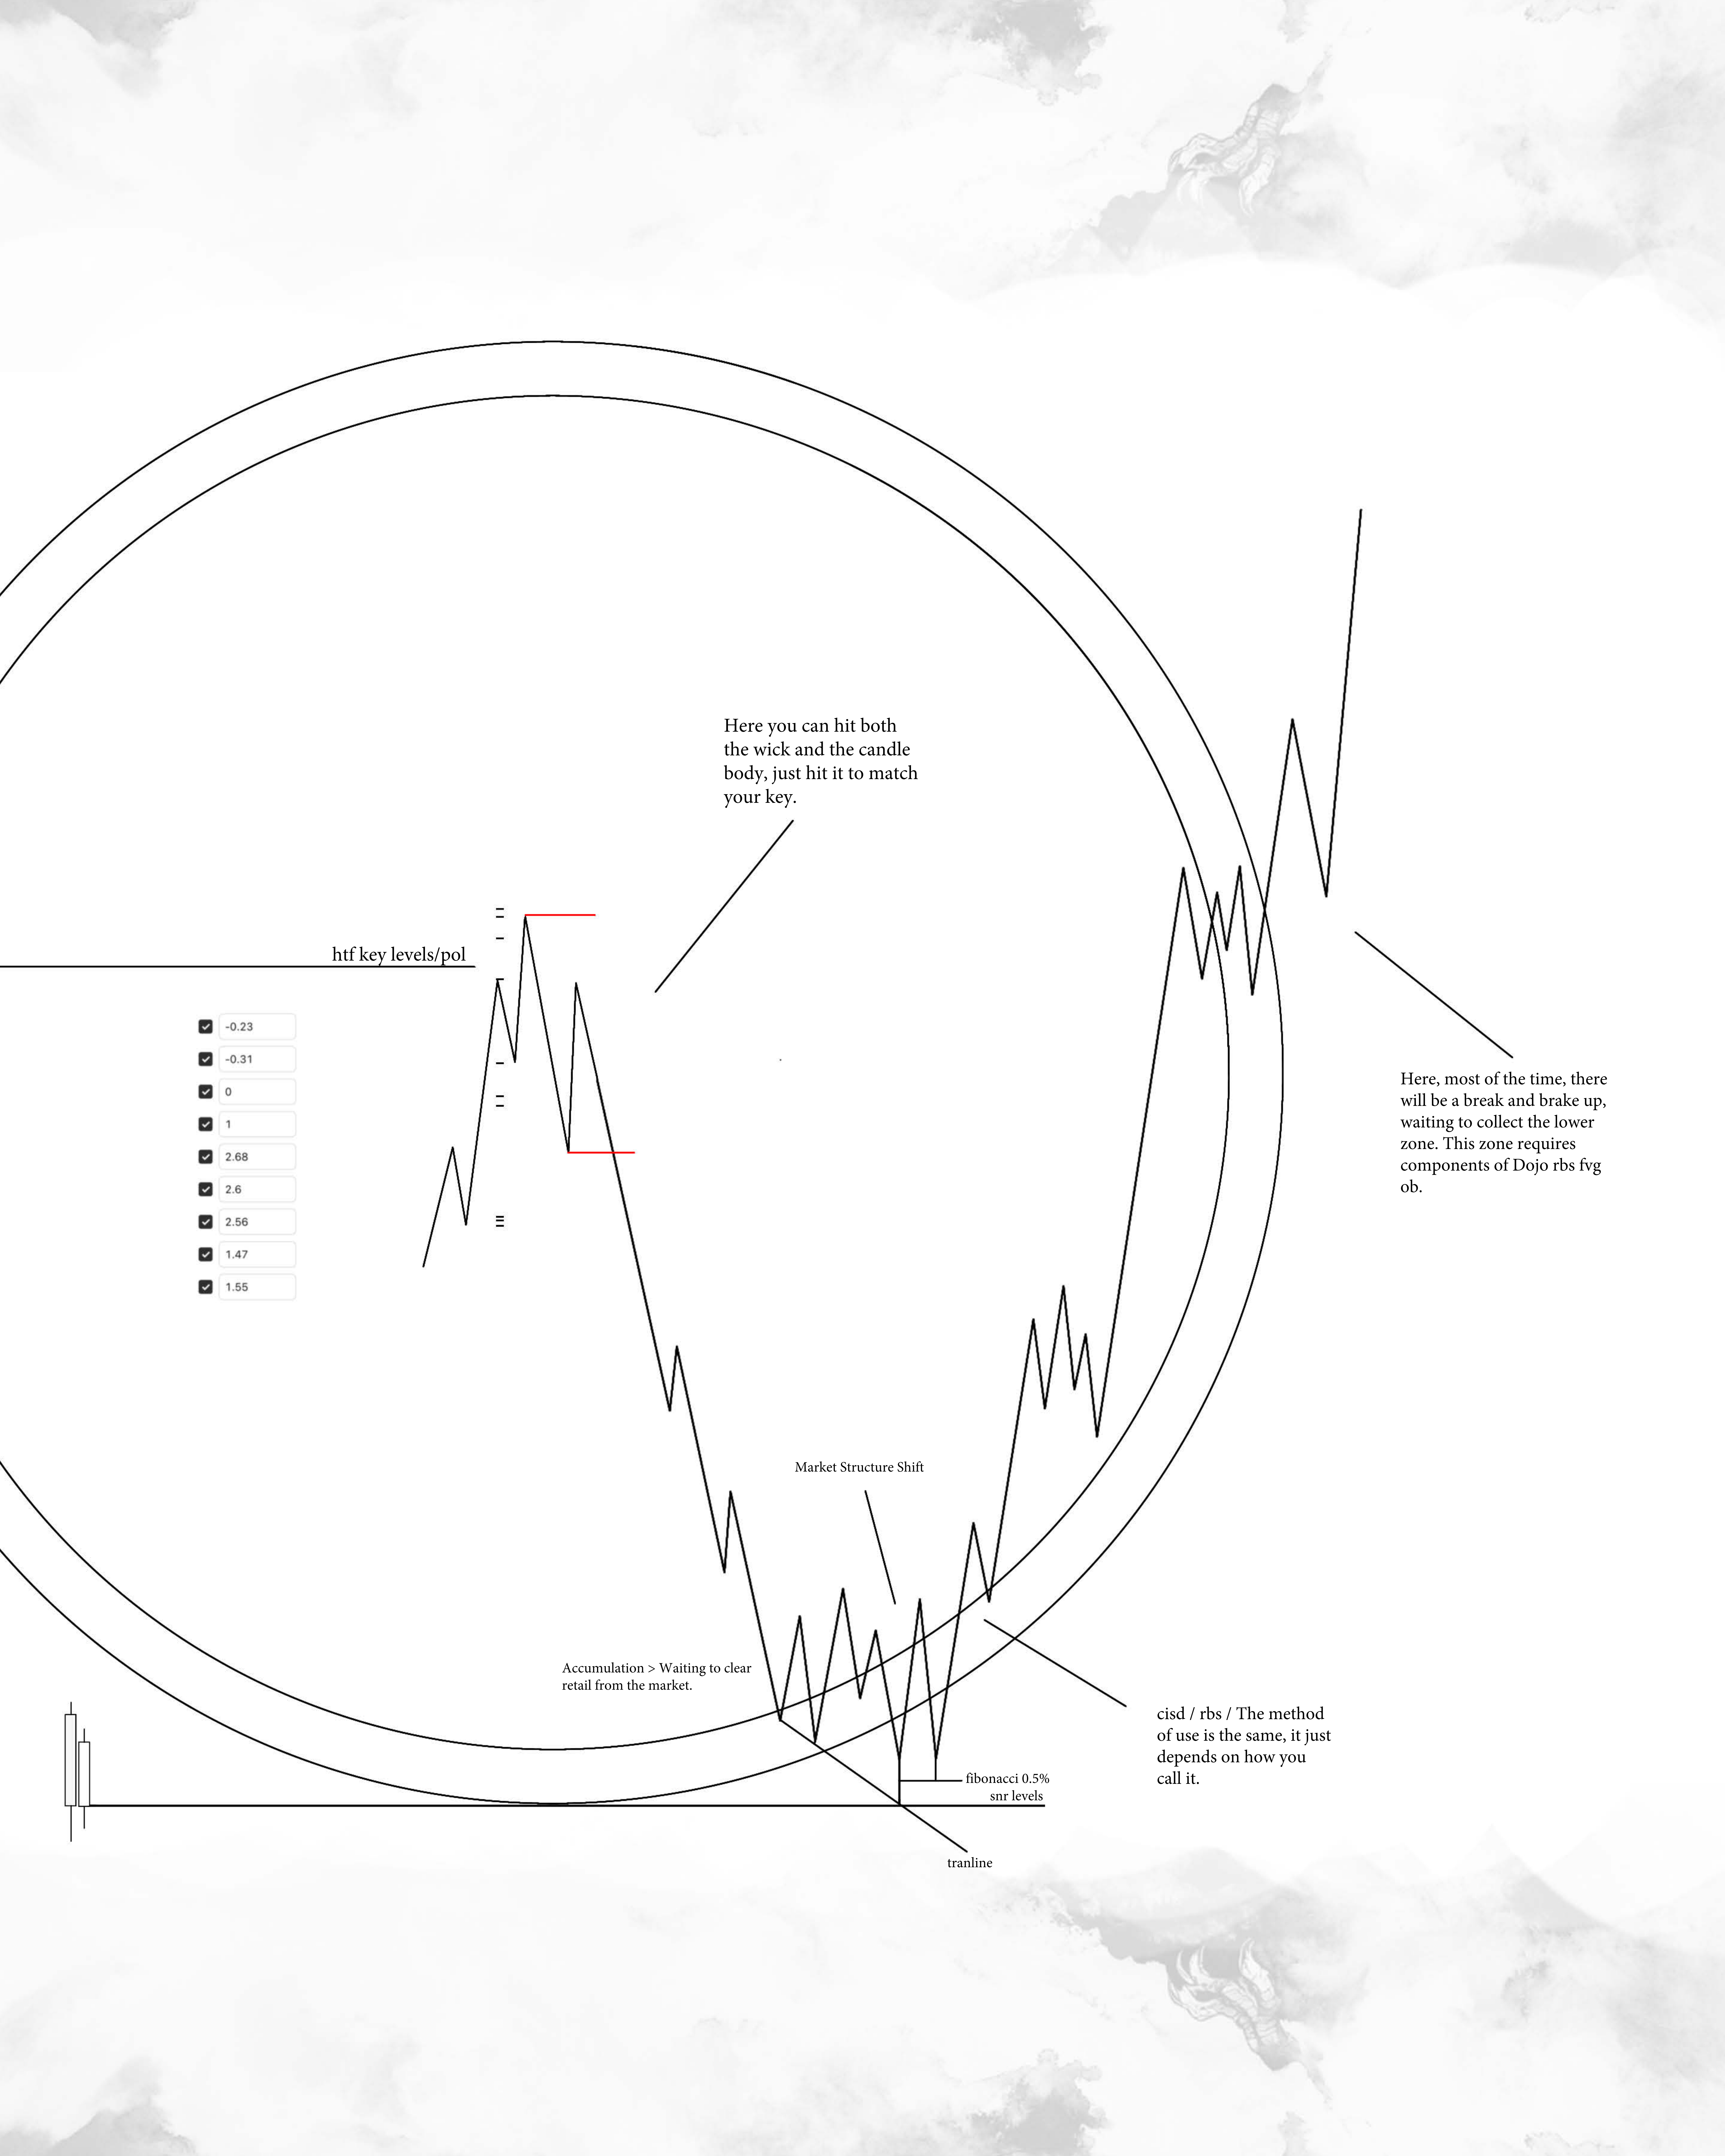

zone 1. Confirm Fibonacci circle, find the key as the important component fvg 0.5 - 0.45

zone 2 confirmed
snr levels +
fibonacci + qml

Find the market structure. It is recommended to draw circle fibo in the time frame of 15 minutes, 30 minutes, 1 hour, 2 hours.

htf key levels/pol

Here you can hit both the wick and the candle body, just hit it to match your key.

Here, most of the time, there will be a break and brake up, waiting to collect the lower zone. This zone requires components of Dojo rbs fvg ob.

Market Structure Shift

Accumulation > Waiting to clear retail from the market.

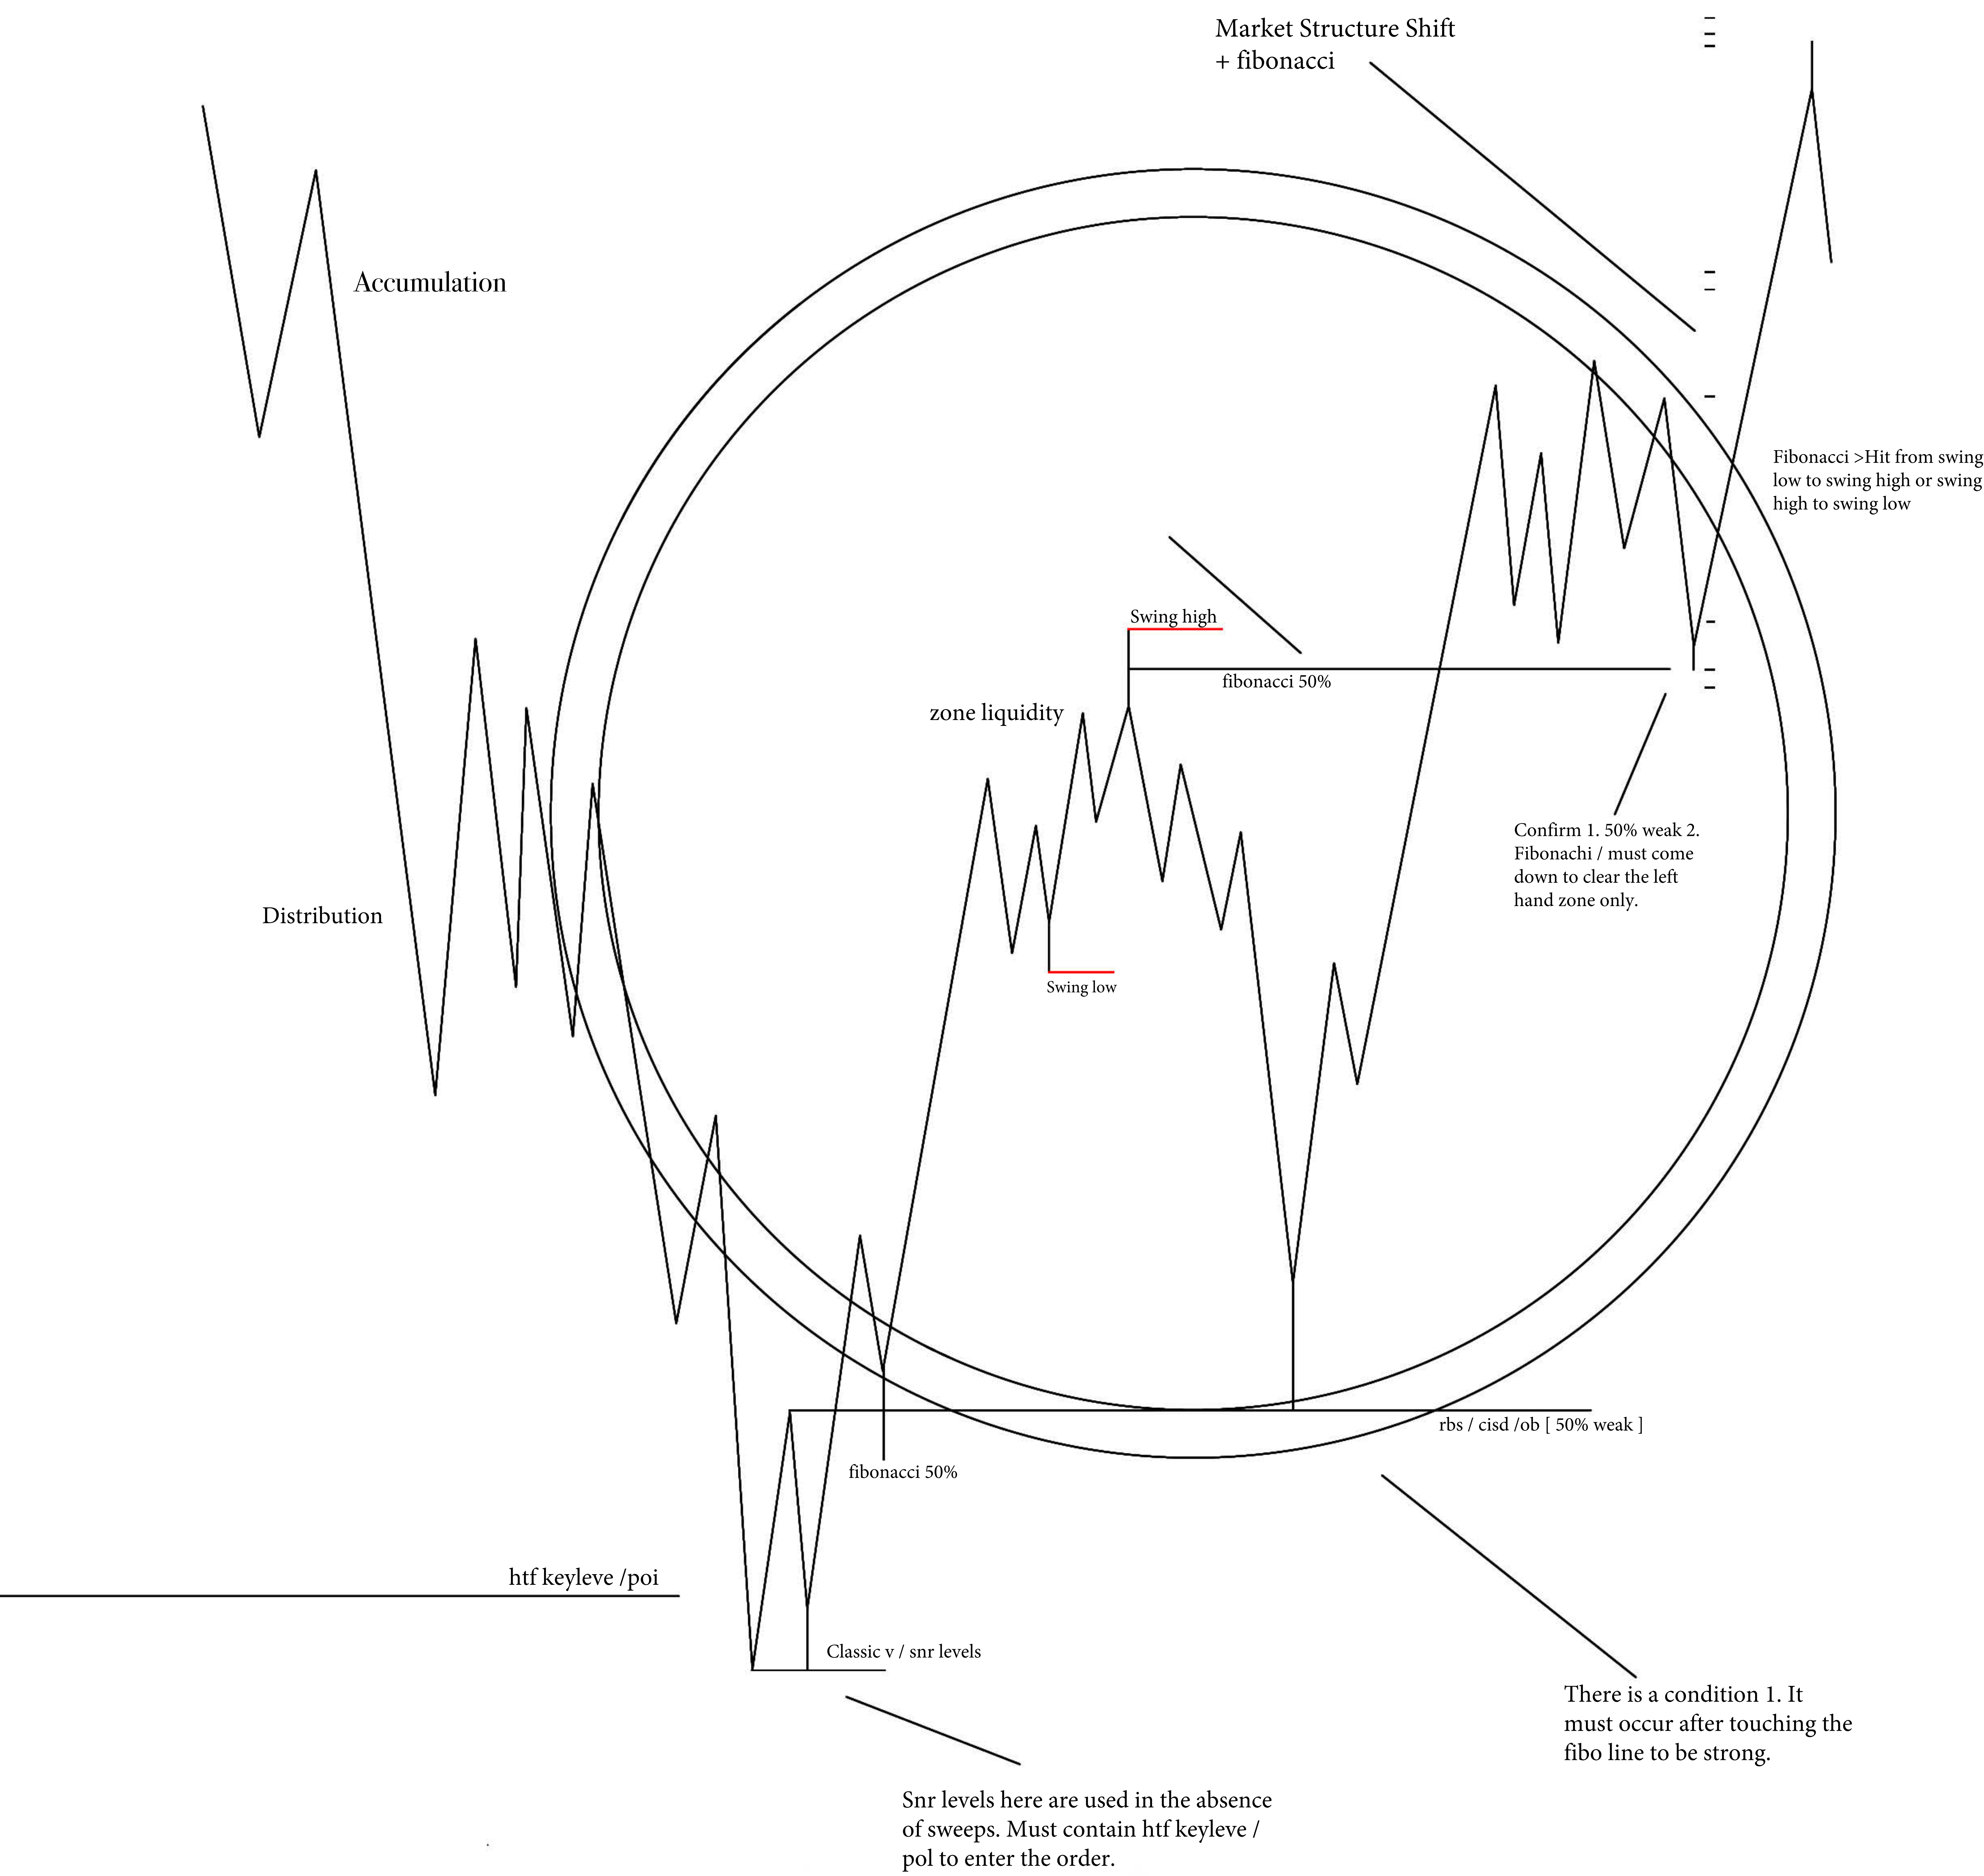

fibonacci 0.5% snr levels

tranline

cisd / rbs / The method of use is the same, it just depends on how you call it.

Everything is up to you how skilled you are.

Original consolidation

Classic v /s.

Buyside

Swing high

Swing low

<< Or use Fibonacci to measure the zone]
run up to qml to go down to find the fvg zone
so that fvg is the sender of the price up.

Here, there will always be fvg for
us. Therefore, we have to find
more confirmation. Let's see the
numbers 1 - 2 - 3 snr.

3

2

1

Fibonacci 0.5%

Touch it, you have to
leave the doji to be strong.

snr levels

☒ 0

☒ 0.5

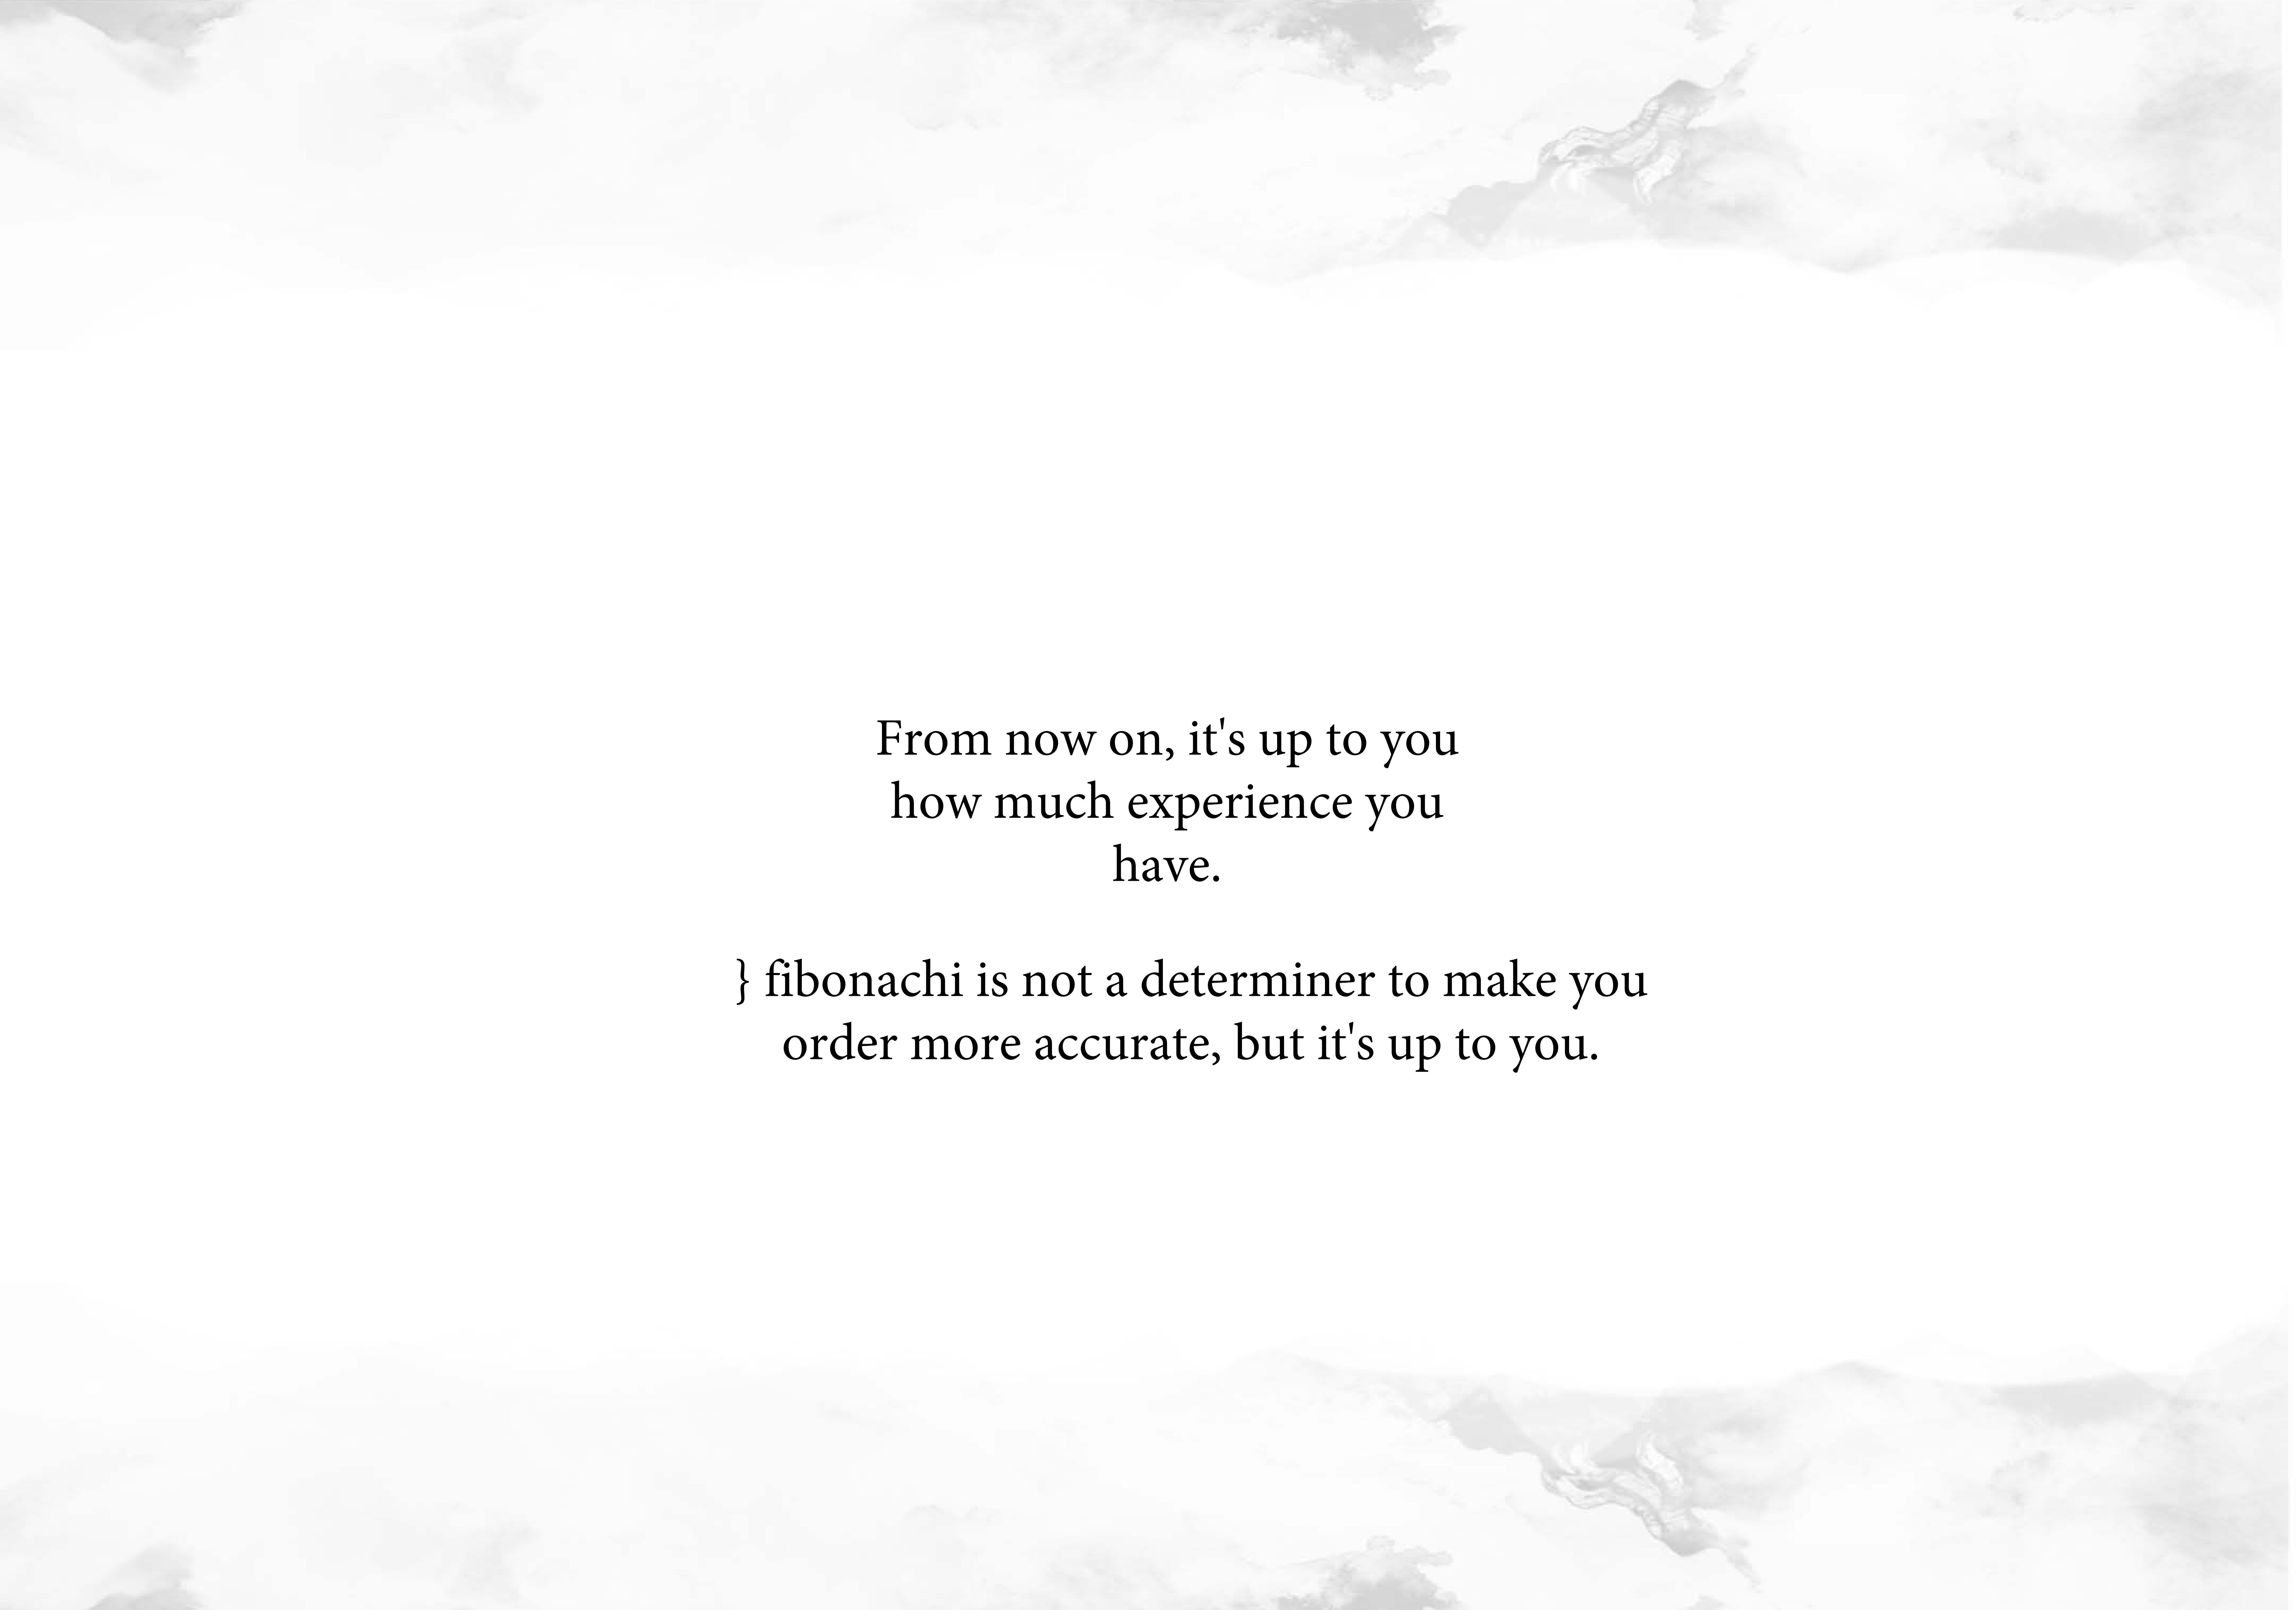

☒ 0.45

☒ 1

☒ 0.618

Must be cleared on the left side
before the price goes up / need to
leave the long filling and use
Fibonacci to measure 0.5%.

It is necessary to have 3
confirmations, 1 fibonacci circle, 2
Fibonacci 0.5%, measured from
the 3 snr level.

From now on, it's up to you
how much experience you
have.

} fibonacci is not a determiner to make you
order more accurate, but it's up to you.
